## INSTALLATION GUIDE

1. After purchasing extensions, go to “My Downloadable Product” in “My Account”. Choose the version of the extension then download it. You may get a zip or tgz file.
2. Before installation, please make sure all cache type are enabled. Go to “System -> Cache Management”, choose all cache types and take action “Enable”.
3. Extract the package you downloaded and upload to your Magento root directory using FTP client ( such as Filezilla, WinSCP, cuteFTP...)
4. After the uploading is done, please flush Magento Cache. Go to “System -> Cache Management”, click “Flush Storage Cahe”.
5. Navigate to System -> Configuration, if you see the extension tab, it has been installed successfully.
6. If you get Access Denied error, please logout and login again.
7. Go to front-end and test your website features. Make sure everything is OK.

### Note:

In case the extension doesn't work properly and you want to temporarily disable it. Please go to /app/etc/modules and rename “Metagento\_ModuleName.xml” to “Metagento\_ModuleName.xml.backup” then contact our support: [support@metagento.com](mailto:support@metagento.com), we will assist you to resolve any issue.
