

Extension

Installation Guide

For
Magento version 2.x

(Please make sure you install the extension on a staging/dev environment first to get familiar with all the functionalities.)

1. Extract the content of extension tarball/zip file. (On Windows OS 7zip program can be useful to extract vast range of packed files.)
2. Upload or paste the content in the root directory of Magento 2 installation.
3. Open up terminal or login via SSH to server and navigate to root directory of Magento 2. Then run below commands.

```
php bin/magento module:enable Mk_Sortby  
php bin/magento setup:upgrade
```

4. In admin panel, go to *System -> Cache Management* and press 'Flush Magento Cache' button.
5. Hoorrray! The extension is installed.
