

## Installation Guide -

To configure this module you need to do the following:

1. Install the extension to your magento server.
2. Enable the plugin .
3. Once enabled, an administrater menu will be created on top right "PushFlew".
4. Click on it and it will automatically generate you unique website ID and Authentication code to access pushflew services.
5. Confirm your email id (Can change it if required and save changes).
6. Now, user will be able to see the popup while surfing on your website and if user allow, you will be able to send push notification to all the subscribers and you're ready to go!
