

PushFlew Plugin for Magento

This extension enable PushFlew push service in Magento site. Once installed it allow user to accept and reject push notification option.

If user accept it, Magento site admin can send Push message through PushFlew Admin Panel.

NOTE: This add a javascript block to enable push service.

IMPORTANT: If your site is HTTPS then you have to give write permission on root directory to create new pushflew_worker.js which support HTTPS or can manually copy the file from plugin directory to your root directory.

Example: https://www.yoursite.com/pushflew_worker.js
