Introduction

This manual describes how you can integrate MultiSafepay within your Magento 2 webshop. Before you can configure the MultiSafepay Magento 2 extension you need to have a MultiSafepay (test) account.

You can register a test account using:

<https://testmerchant.multisafepay.com/signup>

Or you can create a production account using:

<https://merchant.multisafepay.com/signup>

Installing the MultiSafepay Magento 2 extension

The MultiSafepay Magento 2 extension can be installed following two methods, but both require access to the server's commandline interface (CLI).

Manual installation using FTP

When installing the extension using FTP, then you would need the package available on the MultiSafepay website. You can download the extension using the following URL:

<https://docs.multisafepay.com/plugins/magento2/>

Once downloaded you can extract the content and you will have an "app" folder. Using a FTP client, you can **merge** this folder with the app folder of your Magento 2 webshop.

Once the upload is completed you need to open the commandline interface and run the following commands to install the extension:

1. `php bin/magento setup:upgrade`
2. `php bin/magento setup:static-content:deploy`

After running both commands the extension is installed successfully.

Installation using Composer

Installing the extension using Composer will make it easier to install and maintain the package, so installation using Composer is the preferred method of installing the extension.

To install the extension using Composer you need to run the following commands using the commandline interface:

1. `composer require multisafepay/magento2msp`
2. `php bin/magento setup:upgrade`
3. `php bin/magento setup:static-content:deploy`

After running these commands the latest stable release is downloaded and installed within your Magento 2 webshop

Configuration

1. Login on the backend of your webshop and navigate to *System->Configuration->MultiSafepay x.x.x->Connect Settings*.
This page contains all main settings and is used for all gateways and gift cards.
Information about your Merchant ID, Site ID, Site code and API key can be found on our [API key page](#)
2. Navigate to *System->Configuration->MultiSafepay x.x.x->Connect MultiSafepay Gateways*.
This page contains the configuration options for all payment methods supported by MultiSafepay.
Be sure that you have the selected payment methods active in your [MultiSafepay Control](#)
3. MultiSafepay Giftcards
This page contains the configuration options for all gift cards supported by MultiSafepay.
Giftcards need to be activated, more information can be found on our [Giftcard page](#)
4. Fastcheckout
This page contains the [Fastcheckout](#) specific settings.
