# **Extension Installation Guide**

for Magento 2.x

# NANO

1. Unpack the extension ZIP file on your computer.
2. Connect to your website source folder with FTP/SFTP/SSH client and upload all the files and folders from the extension package to the corresponding root folder of your Magento installation:

Please use the "Merge" upload mode. Do not replace the whole folders, but merge them. This way your FTP/SFTP client will only add new files. This mode is used by default by most of FTP/SFTP clients software. For MacOS it's recommended to use Transmit.

# NANO

3. Connect to your Magento directory with SSH.

4. Run 3 following commands:

```
php bin/magento module:enable Nanowebgroup_Modulename
```

```
user@55m:/var/www/store$ php bin/magento module:enable Nanowebgroup_Modulename
```

Please replace the 'Nanowebgroup\_Modulename' with the current modulename.

```
php bin/magento setup:upgrade
```

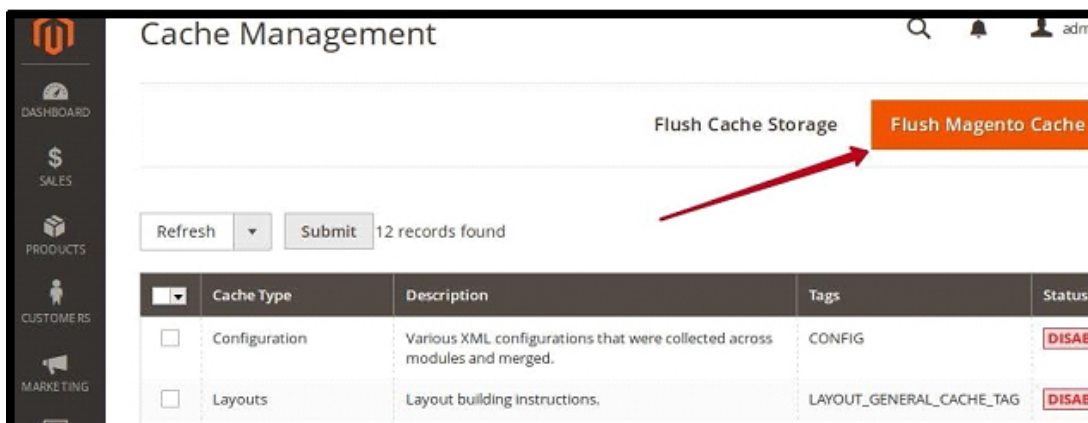

```
user@55m:/var/www/store$ php bin/magento setup:upgrade
```

Clear previously generated JS code

```
user@55m:/var/www/store$ rm pub/static/_requirejs/frontend/Magento/luma/en_US/requirejs-config.js
```

Where "luma" is your current active theme.

5. Go to System —Cache Management page on your Magento backend and click the “Flush Magento Cache ” button. After this action, the extension is installed.
