<b>Installation Instruction</b>	<b>2</b>
1. Composer Installation	2
2. Manual Installation	2

## Installation Instruction

There are two ways you can install this Quickview extension in your Magento 2 eCommerce store. Please find these both ways below -

### 1. Composer Installation

- Run the following command in Magento 2 root directory to install Navigate\_Quickview module via composer.
  - `composer require navigate/magento2-quickview`
  - `php bin/magento setup:upgrade`
  - `php bin/magento setup:static-content:deploy -f`
- If you want to update the module, please execute the below commands in sequence
  - `composer update navigate/magento2-quickview`
  - `php bin/magento setup:upgrade`
  - `php bin/magento setup:static-content:deploy -f`

### 2. Manual Installation

- If you prefer to install this module manually, kindly follow the steps described below –
  - Download the latest version.
  - Once you download the module, go to “**app/code/**” and follow the steps explained below –
    - Create a “**Navigate**” folder.
    - Then, go inside the Navigate folder and create another folder “**Quickview**”
  - Once you create “Quickview” folder, extract the zip file of the module into it.
  - Then, navigate back to Magento root directory and execute the below commands in sequence.
    - `php bin/magento setup:upgrade`
    - `php bin/magento setup:static-content:deploy -f`
