

MYOB EXO Magento2 Integration.

The ERP Systems to help you see the bigger picture

Step 1: Extension setup

To complete the installation, run below commands

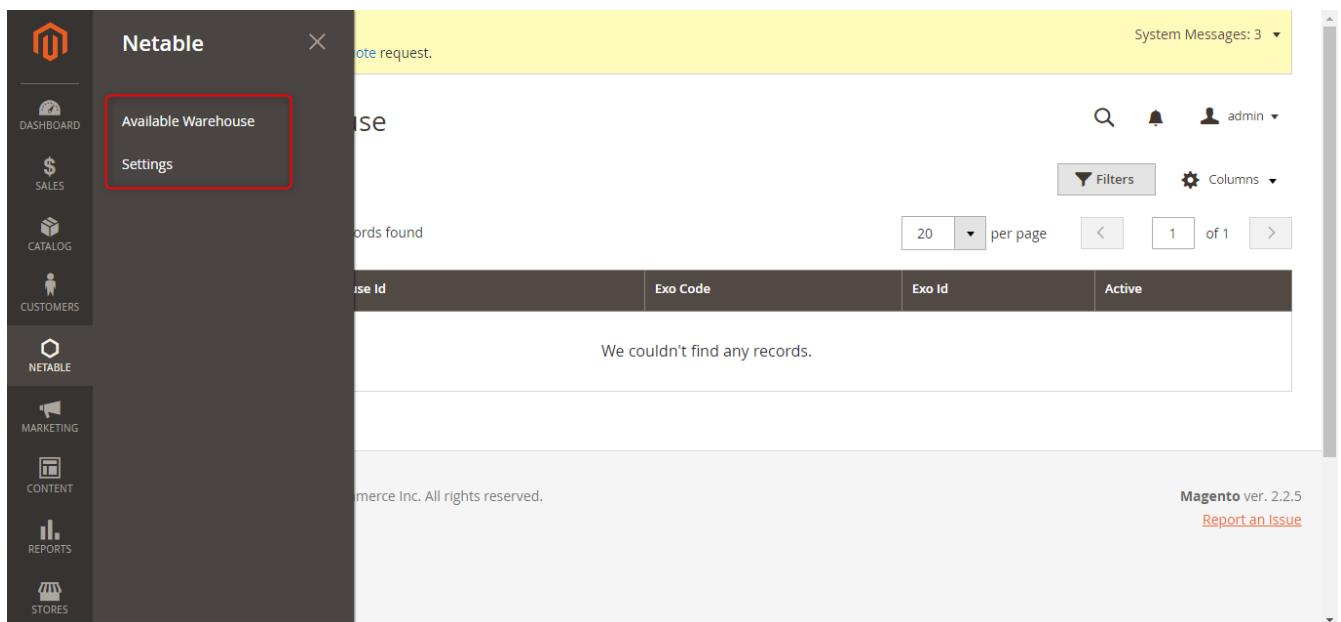

```
php bin/magento module:enable Netable_Exo
```

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:static-content:deploy
```

Step 2: Configuration

Once you installed the extension you will notice these menu items

The screenshot shows the Netable extension's sidebar menu in a Magento 2 admin interface. The sidebar is dark grey and contains several menu items: DASHBOARD, SALES, CATALOG, CUSTOMERS, NETABLE, MARKETING, CONTENT, REPORTS, and STORES. The 'NETABLE' section is expanded, showing two sub-items: 'Available Warehouse' and 'Settings'. The 'Available Warehouse' item is highlighted with a red rectangular box. The main content area of the admin interface is visible in the background, showing a search bar, a user profile (admin), and a table with columns 'Warehouse Id', 'Exo Code', 'Exo Id', and 'Active'. The table is currently empty, displaying the message 'We couldn't find any records.' The footer of the page indicates 'Magento ver. 2.2.5' and a link to 'Report an Issue'.

Now go to settings and update your configuration

- SERVICES
- ADVANCED

Import only active products. [store view] No
Set this to 'yes' if you want to sync only active products from EXO. Leave the value to 'No' if you want to import all products.

Create container products. [store view] No
Set this to 'yes' if you want to create container product with generic data. Plugin will use Primary Groups field in EXO product to create container SKU and assign the imported product to this container product. Please make changes to container description and other information after import to suit store requirements. Leave the value to 'No' if you just want to import EXO products as simple products in Magento.

Check live inventory on 'Add to Cart.' [store view] No
Set this to 'yes' if you want to check live inventory for product when user adds it to cart. Leave the value to 'No' if you want to check inventory from last update.

Products Import Email Template [store view] Products Import Email Template (Default)
Email template to notify admin of number of products imported/updated.

Product Import Email Sender [store view] General Contact

Email Send To [store view]

If you have warehouse locations in your MYOB EXO everything will be synced to the Magento
