

Clear Old Cart extension for Magento 2

Installation Guide

Installation methods

There are at least 3 ways to install this extension:

- The preferred way of installing this extension is through `Composer`. Simply add `okaeli/module-clear-old-cart` as a dependency:

```
composer require okaeli/module-clear-old-cart
```

- As an alternative, you should use the `Web Setup Wizard` tool in your Magento® 2 backend.
- Finally, you could also extract the zip folder and upload our extension to the `app/code/okaeli/ClearOldCart` folder inside your Magento® 2 root directory.

Post Installation

Enable the module

After the installment of the module source code, the module has to be enabled by the Magento 2 CLI.

```
bin/magento module:enable Okaeli_ClearOldCart
```

System Upgrade

After enabling the module, the Magento 2 system must be upgraded.

If the system mode is set to production, run the compile command first. This is not necessary for the developer mode.

```
bin/magento setup:di:compile
```

Then run the upgrade command:

```
bin/magento setup:upgrade
```

Clear Cache

The Magento 2 cache should be cleared by running the flush command.

```
bin/magento cache:flush
```

Deploy static content

At last, you have to deploy the static content:

```
bin/magento setup:static-content:deploy -f
```
