PHP setting	Result
PHP Version	5.5.33-1+deb.sury.org~precise+1

Overview

Main features

It gives comprehensive information inside admin panel about:

- Magento recommended settings
- Server recommended settings
- Database settings
- Analysis of Magento core code
- Analysis of database
- Magento extensions analysis, which extension overwrites what file
- Cache information

Installation

1. Install Magento

Compatible with:

1.5,
1.6,
1.6.1,
1.6.2.0,
1.7,
1.8,
1.8.1,
1.9,
1.9.1,
1.9.2,
1.9.3

2. Install this module

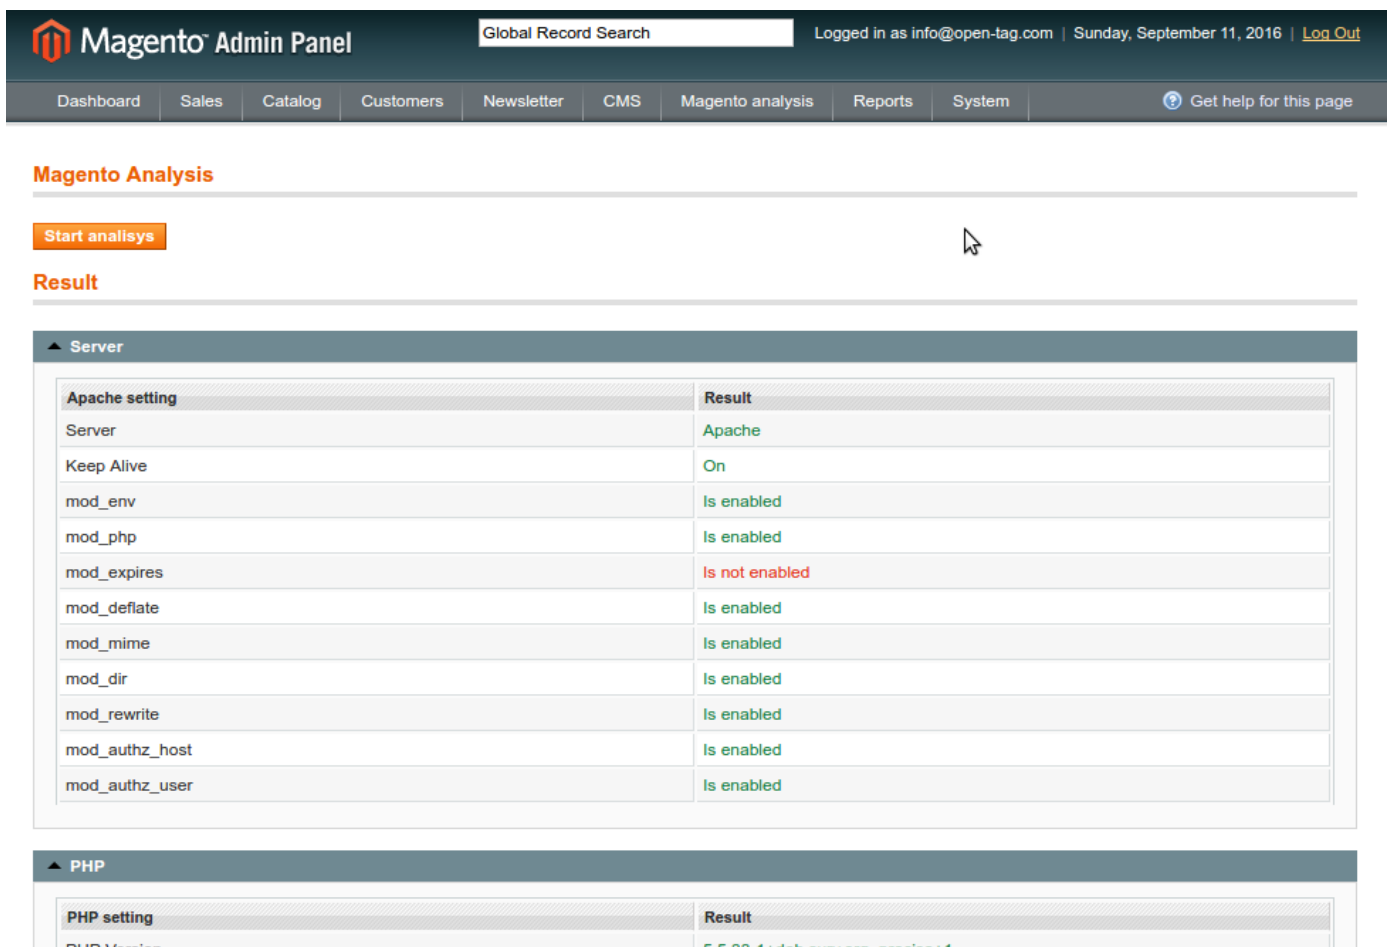

- Install through Magento Connect with the extension key
- Download archive and copy to your Magento folder

Quick tour

1. Log into your Admin panel
2. Locate the button 'Ecommerce analysis' on the Navigation bar
3. Click 'Start analysis'
4. See the results

Examples:

Server configuration

The screenshot displays the Magento Admin Panel interface. At the top, the navigation bar includes the Magento logo, 'Admin Panel', a search bar, and user information. The main navigation menu contains 'Dashboard', 'Sales', 'Catalog', 'Customers', 'Newsletter', 'CMS', 'Magento analysis', 'Reports', and 'System'. A 'Get help for this page' link is also present.

The 'Magento Analysis' section is active, featuring a 'Start analysis' button. Below this, the 'Result' section is expanded to show server and PHP configurations.

Server Configuration Table:

Apache setting	Result
Server	Apache
Keep Alive	On
mod_env	Is enabled
mod_php	Is enabled
mod_expires	Is not enabled
mod_deflate	Is enabled
mod_mime	Is enabled
mod_dir	Is enabled
mod_rewrite	Is enabled
mod_authz_host	Is enabled
mod_authz_user	Is enabled

PHP Configuration Table:

PHP setting	Result
PHP Version	5.5.33-1+deb.sury.org~precise+1

PHP extensions

PHP setting	Result
PHP Version	5.5.33-1+deb.sury.org~precise+1
Extension curl	is installed
Extension dom	is installed
Extension gd	is installed
Extension hash	is installed
Extension iconv	is installed
Extension mcrypt	is installed
Extension mhash	is installed
Extension PDO	is installed
Extension pdo_mysql	is installed
Extension SimpleXML	is installed
Extension soap	is installed
memory_limit	is 256M
Extension apc	is required

Database setting	Result
InnoDB Buffer Pool Size	Recommended value is at least 256M, but should be set to around 70% of available RAM on a dedicated database server . Currently set to 128M
InnoDB Autoextend Increment	No changes required. Currently set to 64
InnoDB Thread Concurrency	Magento recommends a value of at least 8 If possible, this value should be set as high as the maximum (16) . No changes required. Currently set to 0
Slow Query Log	On a production server, this setting should be set to OFF as it is considerable overhead on the database 'OFF' No changes required Currently set to 'OFF'
