

Overview

This repository contains a Magento 2 extension which serves as a middleware with Ordergroove's subscription service.

- Compatibility:
 - Magento Community: 2.3.5
 - Magento Enterprise: 2.3.5

Installation Instructions

Install [Ordergroove/Subscription](#) through one of the following two methods. After that, configure the module to connect to Ordergroove [as described below](#).

Install through Composer (recommended)

Run the following commands in your root Magento installation directory:

```
composer require ordergroove/subscription
bin/magento module:enable Ordergroove_Subscription
bin/magento setup:upgrade
bin/magento cache:flush
```

Install through app/code (not recommended)

Note: When installing through app/code, upgrading the module in the future will be more difficult.

1. Create the following directory: [app/code/Ordergroove/Subscription](#)
2. Download the [latest release](#) for the module. (You can download previous releases through this link as well)
3. Extract and copy the files to [app/code/Ordergroove/Subscription](#).
4. Run the following commands in your root Magento installation directory:

```
bin/magento module:enable Ordergroove_Subscription
bin/magento setup:upgrade
bin/magento cache:flush
```

Documentation

Configuration

All configuration is located under [Stores > Configuration > Ordergroove > Subscription](#). Configuration is available per website, and will not be visible on the default scope.

The screenshot shows a configuration page for 'Main Website'. At the top right is a 'Save Config' button. On the left is a navigation menu with categories: GENERAL, CATALOG, SECURITY, CUSTOMERS, SALES, ORDERGROOVE (expanded), Subscription, SERVICES, and ADVANCED. The main content area is divided into two sections:

- General Configuration:**
 - Module Enabled (website): Enable
 - Environment (website): Staging
 - Public ID (website): ordergroove_given_public_id
 - Hash Key (website): [Redacted]
- SFTP Configuration:**
 - Sync Schedule is only available in the default view level.
 - Host (website): staging.feeds.ordergroove.com
 - Port (website): 22
 - Username (website): ordergroove_given_sftp_username
 - Password (website): [Redacted]
 - Check Connection: Check Connectivity

General Configuration

- **Module Enabled** - Choose whether the module is enabled or not
- **Environment** - Determines whether to use staging urls for **Ordergroove operations only**
- **Public ID** - Ordergroove Public / Merchant ID. Provided by Ordergroove when setting up an account.
 - **Note:** Public ID should be unique for each website, and should *not* be reused on multiple websites.
- **Hash Key** - Ordergroove Hash Key. Provided by Ordergroove when setting up an account.
 - **Note:** - Hash Key should belong to a corresponding Public ID.

SFTP Configuration

- **Sync Schedule** is only available in the Default Config scope.
 - Select the hour of the day (EST) at which the product sync will occur.

This screenshot shows the 'SFTP Configuration' section of the configuration page. It includes the same navigation menu on the left. The main content area shows:

- Sync Schedule is only available in the default view level.
- Sync Schedule (EST) (global): 1:00

- **Host** - Un-editable host string. Always points to feeds.ordergroove.com

- **Port** - Un-editable port string. Is always 22
- **Username** - SFTP Username provided by Ordergroove
- **Password** - SFTP Password provided by Ordergroove
- **Check Connection** - Click after inputting username and password to determine if the credentials are valid.

Logs

Ordergroove/Subscription will log various important information to log files located within `var/log/ordergroove`. For example, any product sync related errors will be logged to `var/log/ordergroove/product_sync/error.log`, and product sync related messages to `var/log/ordergroove/product_sync/info.log`.

Recurring Order (Order Placement)

Ordergroove should be configured to send recurring orders to `<website_url>/ordergroove/subscription/placeorder`
