

## Setting Search

### How to use

1. Open admin with your login and password
2. If you have permissions to use Global Search than you must see search elements
3. Activate search elements by ctrl+f combination or by clicking on search element
4. Type a setting name that you want to find
5. In a couple seconds (it depends on performance of your server) Magento will provide you a list of possible settings that you described with your request. Please note that you may type not only exactly full setting names.
6. Each search result has a type. It can be a Section, a Group, a Field.
7. After clicking on an appropriate result, Magento will open Store configuration page, highlight the element and scroll down automatically if the element is a field or a group. If the element isn't visible by any reason, its parent will be selected instead (Section > Group > Field)
8. If none of results is appropriate for you, you can click on "... in Settings" to search by yourself.

### NOTE:

The search is case insensitive, processes part of the names, doesn't process special chars.

For example:

"check order" will find "Check / Money Order".

Keep in mind, the most correct request the most appropriate results.
