2. If using Sandbox Mode:
 - a. Set Sandbox to “Yes”
 - b. Enter Sandbox API Key and Sandbox API Token
3. If using Production Mode:
 - a. Set Sandbox to “No”
 - b. Enter Production API Key and Production API Token

Please email us at cs@paybright.com to get your API Credentials.

4. If the product page prequalify widget is set to “Yes” - “Prequalify” widget will appear below the “Add to Cart” button on PDP.
 - a. Please note that “Prequalify” widget will show up only if CAD currency is used and amount is more than CA\$200 (threshold may be changed).

5. If the cart page prequalify widget is set to “Yes” - “Prequalify” widget will appear after Shopping Cart Grand Total on cart page.
 - a. Please note that “Prequalify” widget will show up only if CAD currency is used and amount is more than CA\$200 (threshold may be changed).

6. If “Debug logging” is set to “Yes” - all API requests and responses will be logged to **<Magento root>/var/log/paybright_transactions.log**. All exceptions will be logged to **<Magento root>/var/log/paybright_error.log**.

7. Enter configuration data and click “Save Config”.
