## 1.Introduction

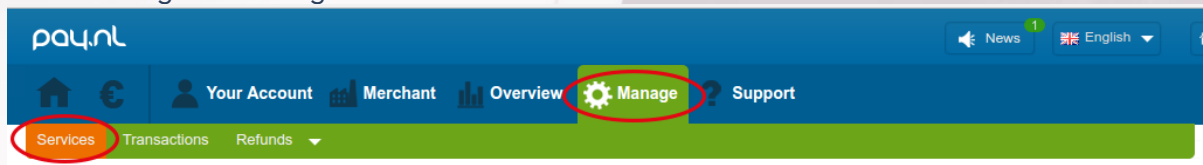

In this manual we'll explain the steps needed to take to link your Magento 2 webshop to the payment methods of Pay.nl

In order to use this plugin, you'll need a Pay.nl account. If you don't have an account yet, use the following link to register <https://www.pay.nl/registreren>.

## 2. In the Pay.nl Admin

Go to <https://admin.pay.nl> and login with your email address and password

In the menu go to "Manage" "Services"

## 2.1 Add the service

In the next page, you'll find your websites. If your Magento website is already listed here, you can skip this step. Click edit and move to step 2.2

On the bottom right click add

Services overview "My company" This is how you add a service (website or webshop) Configuration

Services

Code	Website	Connected via	Mode	Options
<input type="checkbox"/> SL-6355-0740	My magento webshop	Webshop plugin Magento (v: 2.1)	<span>Live, switch on test</span>	<a>Edit</a> <a>Info</a> <a>Plug-in</a> <a>Example T&amp;C (NL)</a> <a>Test payment</a>

Delete **+** Add

In the next page, some information about your website is asked. Try to select the category that best fits your website. The red circled fields are important when you're using the magento2 plugin, use the same values as in the screenshot below.

### Add new service

**General information**

The name of your service  Choose the name of your service. This will show up in your statistics.

URL / Site  Describe the location of your service. For instance an URL like http://www.yourwebshop.com/. Do you offer your service at multiple locations?

Category  Please select the category of your service; always select the category that best describes your service.

**Module**

Declare the service  What are you selling? Which products or services do you offer on your website?

Module  Choose your payment module, what kind of payment do you want use?

Connected via  Do you have a custom ecommerce system? You can use our API. If you have a common CMS, you can use download our plugin. We also offer a standard payment screen to start accepting simple payments.

Plug-in  Webshop versie

## 2.2 Enabling payment methods

Enable the checkboxes for each payment method that you want to use. Payment methods that are not enabled here cannot be enabled in Magento.

## 2.3 Other settings

### Communication URL's

After checking the payment methods that you want to use there are some extra settings that can be fine-tuned. The plugin will work with the standard settings, but when something goes wrong in the communication between pay.nl and your webshop pay.nl will not retry.

See the below screenshot for the advised settings.

**Communication URL's**

The communication URL is a webservice we call when a payment state changes (new\_ppt, cancel, delete and several more actions)

Setup communication url

Request method  How do you want to get the communication URL calls

Repeat requests   Whenever the server is down or your system doesn't return TRUE, we will retry to get a valid response. You can set the frequency and timespan here.

### Notifications

When a new payment is made, or an error has occurred in the communication with your webshop, we can send you a notification email. To enable this, check the checkbox under notifications and set one or more email addresses.

**Notifications**

We will send an e-mail to the e-mail addresses that have the "Notifications"option enabled. These can be set below the Contact info header at the Merchant -> Company data (connection) tab.

Merchant email addresses  Yes, send to e-mail addresses

Email addresses  Enter the email addresses to which we can send the notifications.

## 2.4 API token and serviceld

The plugin uses the API token and serviceld to connect to your pay.nl account. To get your API token and serviceld click on Info

Services overview "My company" This is how you add a service (website or webshop) Configuration

Services

Code	Website	Connected via	Mode	Options
<input type="checkbox"/> SL-6355-0740	My magento webshop	Webshop plugin Magento (v: 2.1)	<span>Live, switch on test</span>	<a>Edit</a> <a>Info</a> <a>Plug-in</a> <a>Example T&amp;C (NL)</a> <a>Test payment</a>

Delete + Add

In the popup the API token and serviceld are shown

Info: My magento webshop ×

Parameter	Value
serviceld	SL-6355-0740
programId	36847
websiteId	2
websiteLocationId	1

API Tokens

Token	Account ID	Right groups
0123456789abcdefghijklmnop1234567890	432874	Transaction / shop and refund rights

We are going to use this API token and serviceld in the next chapter

### 3. In the Magento 2 Admin

After you've installed the plugin, it still needs to be configured. On the bottom left, click stores and in the menu click configuration. Now go to "Sales" "Payment methods"

The image shows two side-by-side screenshots of the Magento 2 Admin interface. The left screenshot displays the 'Stores' configuration menu with 'Configuration' circled in red. The right screenshot shows the 'Sales' configuration page with 'Payment Methods' circled in red.

**Stores Configuration Menu (Left Screenshot):**

- Dashboard
- Settings
- All Stores
- Configuration** (circled in red)
- Terms and Conditions
- Order Status
- Taxes
- Tax Rules
- Tax Zones and Rates
- Currency
- Currency Rates
- Currency Symbols
- Attributes
- Product
- Attribute Set
- Rating
- Other Settings
- Customer Groups

**Sales Configuration Page (Right Screenshot):**

- Store View: Default Config
- GENERAL
- CATALOG
- CUSTOMERS
- SALES** (circled in red)
- Sales
- Sales Emails
- PDF Print-outs
- Tax
- Checkout
- Shipping Settings
- Multishipping Settings
- Shipping Methods
- Google API
- Payment Methods** (circled in red)
- SERVICES

### 3.1 Configure the API token and serviceId

Open pay.nl settings and fill in the API token and ServiceId from step 2.4.

Pay.nl Settings

Testmode: No [WEBSITE]

API-token: 1234567890abcdefghijklmnop12345678909 [STORE VIEW]

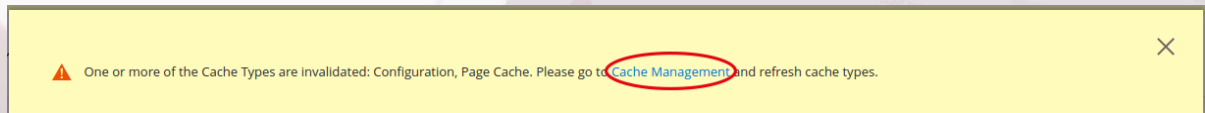

ServiceId: SL-0123-4567 [STORE VIEW]

Paymentmethods

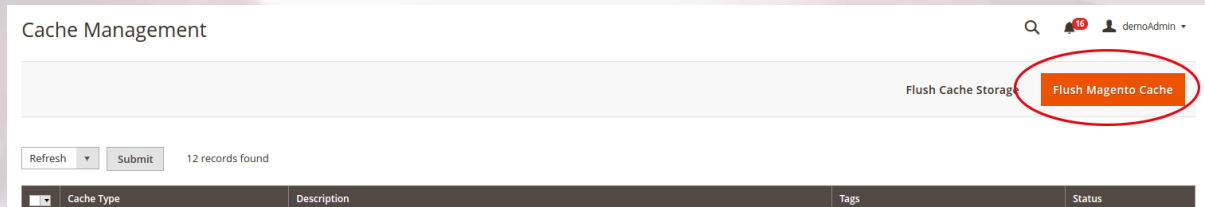

**Important! Now save the form and flush the cache.**

Otherwise Magento will think the payment methods are not available.

After saving the settings, Magento will show a notice about the cache being invalid. Click the link in the notification.

On the next page click "Flush Magento cache"

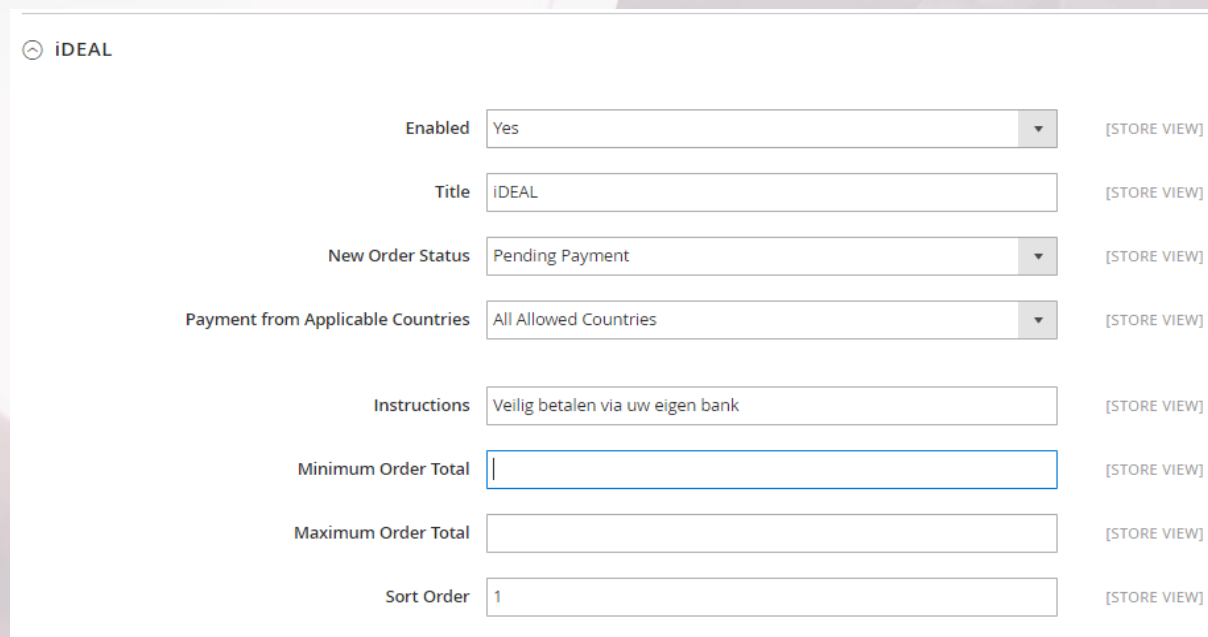

## 3.2 Enabling the payment methods

Go back to the pay.nl settings from step 3.1.

Open the group “payment methods” and open the payment method that you want to enable.

Set the setting enabled to yes, now the settings for the payment method are shown.

The screenshot shows the configuration page for the IDEAL payment method. The settings are as follows:

Setting	Value	Action
Enabled	Yes	[STORE VIEW]
Title	IDEAL	[STORE VIEW]
New Order Status	Pending Payment	[STORE VIEW]
Payment from Applicable Countries	All Allowed Countries	[STORE VIEW]
Instructions	Veilig betalen via uw eigen bank	[STORE VIEW]
Minimum Order Total		[STORE VIEW]
Maximum Order Total		[STORE VIEW]
Sort Order	1	[STORE VIEW]

Here you can set the settings for the payment method. If you can't enable a payment method, make sure it is enabled in step 2.2.

With credit cards it can take up to 2 weeks before you can enable the payment method, this is because we need to setup a connection with our acquirer before credit cards can be used.

When you have setup all payment methods, click save settings.

Now the cache needs to be flushed again.

You are now ready to receive payments with your webshop.

## 4. Questions

When you run into problems installing or configuring the plugin, please send an email to [support@pay.nl](mailto:support@pay.nl).
