| 3 | In the Magento 2 admin | page 7 |

1. Introduction

In this manual we'll explain the steps needed to take to link your Magento 2 webshop to the payment methods of PAY.nl

In order to use this plugin, you'll need a PAY.nl account. If you don't have an account yet, use the following link to register <https://www.pay.nl/registreren>.

Contact

When you run into problems installing or configuring the plugin, please contact us using the following information.

PAY.nl Support

T 088 886 6666

E support@pay.nl

Magento Support

W <https://magento.com/support>

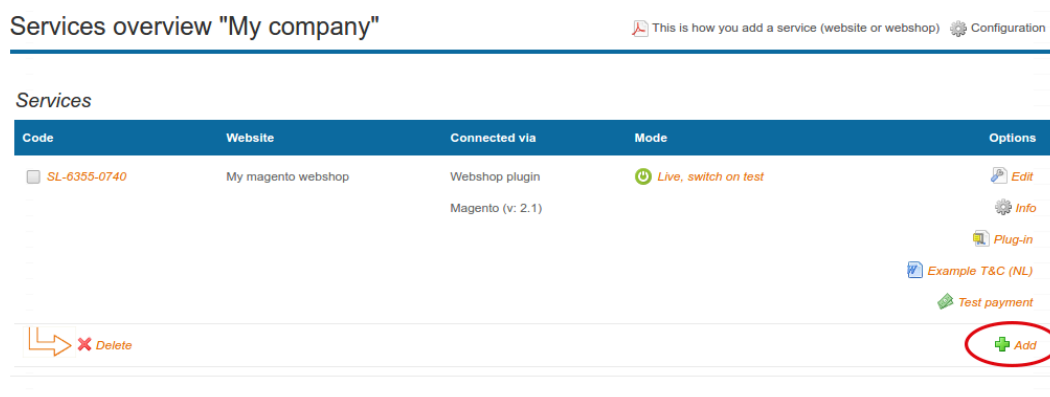

2. In the PAY.nl admin

Go to <https://admin.pay.nl> and login with your email address and password. In the menu go to “Manage” “Services”

Add the service

In the next page, you'll find your websites. If your Magento website is already listed here, you can skip this step.

On the bottom right click add

In the next page, some information about your website is asked. Try to select the category that best fits your website. The red circled fields are important when you're using the Magento 2 plugin, use the same values as in the screenshot below.

Add new service

General information

The name of your service Choose the name of your service. This will show up in your statistics.

URL / Site Describe the location of your service. For instance an URL like http://www.yourwebshop.com/. Do you offer your service at multiple locations?

Category Please select the category of your service; always select the category that best describes your service.

Module

Declare the service What are you selling? Which products or services do you offer on your website?

Module Choose your payment module, what kind of payment do you want use?

Connected via Do you have a custom ecommerce system? You can use our API. If you have a common CMS, you can use download our plugin. We also offer a standard payment screen to start accepting simple payments.

Plug-in

Enabling payment methods

Enable the checkboxes for each payment method that you want to use. Payment methods that are not enabled here cannot be enabled in Magento.

Other settings

After selecting the payment methods, you can setup a “Communications URL”. The plugin will work with the standard settings, but when something goes wrong in the communication between PAY.nl and your webshop, we will not retry.

Communication URL's

The communication URL is a webservice we call when a payment state changes (new_ppt, cancel, delete and several more actions)

| | | |
|-------------------------|--|--|
| Setup communication url | <input type="checkbox"/> Yes, set by API or PLUGIN | |
| Request method | <input type="text" value="TXT (POST)"/> | <i>How do you want to get the communication URL calls</i> |
| Repeat requests | <input checked="" type="checkbox"/> <input type="text" value="1 time (after 15 minutes)"/> | <i>Whenever the server is down or your system doesn't return TRUE, we will retry to get a valid response. You can set the frequency and timespan here.</i> |

The advised settings for Communication URL's

Do you want to receive a notification of all successful payments? This is possible. Just activate our notification service. From now on you will receive a notification after a successful transaction.

Notifications

We will send an e-mail to the e-mail addresses that have the "Notifications"option enabled. These can be set below the Contact info header at the Merchant -> Company data (connection) tab.

| | | |
|--------------------------|---|--|
| Merchant email addresses | <input checked="" type="checkbox"/> Yes, send to e-mail addresses | |
| Email addresses | <input type="text" value="notification@email.com"/> | <input type="button" value="✕"/> <input type="button" value="+"/> <i>Enter the email addresses to which we can send the notifications.</i> |

API token and Service-ID

The plugin uses the API token and Service-ID to connect to your PAY.nl account. To get your API token and Service ID click on "Info".

Services overview "My company"

 This is how you add a service (website or webshop)  Configuration

Services

| Code | Website | Connected via | Mode | Options |
|---------------------------------------|--------------------|------------------------------------|---|--|
| <input type="checkbox"/> SL-6355-0740 | My magento webshop | Webshop plugin Magento (v: 2.1) | ● Live, switch on test | Edit Info Plug-in Example T&C (NL) Test payment Add |

 [Delete](#)

In the pop-up the API token and Service ID are shown.

Info: My magento webshop

| Parameter | Value |
|-------------------|--------------|
| serviceId | SL-6355-0740 |
| programId | 36847 |
| websiteId | 2 |
| websiteLocationId | 1 |

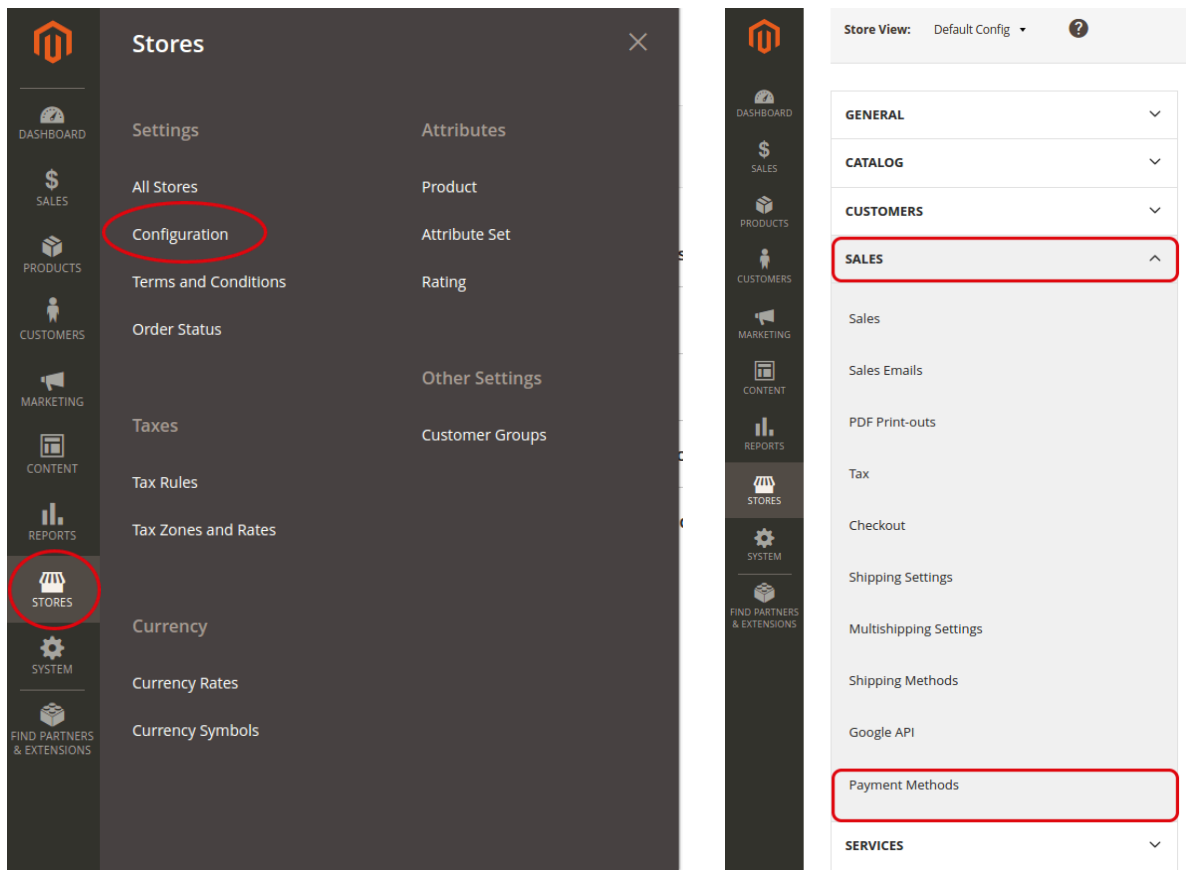

API Tokens

| Token | Account ID | Right groups |
|--|------------|--------------------------------------|
| 0123456789abcdefghijklmnop1234567890 <small>API token</small> | 432874 | Transaction / shop and refund rights |

We are going to use this API token and Service-ID in the next chapter.

3. In the Magento 2 admin

After you've installed the plugin, it still needs to be configured. On the bottom left, click "Stores" and in the menu click "Configuration". Now go to "Sales" "Payment methods"

Configure the API token and Service-ID

Open PAY.nl “Settings” and fill in the API token and Service-ID.

⌂ PAY. Settings

Version 2.4.0

Testmode [store view] Yes

Tokencode [store view] AT-1234-1234
 Get your AT-code [here](#). Not registered at PAY? Sign up [here!](#)

API-token [store view] 01234567890ABCDEFGHIJKLMNPOQRSTUVWXYZ012
 Your API-token, you can find your tokens [here](#)

Serviceid [store view] SL-1234-1234
 The SL-code of your service, you can find your services [here](#)

Language payment screen [store view] English

Never cancel order [store view] No
 This setting will disable cancelling the order when the payment is canceled. This can be used if uncancelling the order in case of a second chance payment produces errors. WARNING! Orders will never be cancelled automatically

Always use base currency [store view] No
 Set this to yes if you always want to process payments in the base currency of this store. Magento acts strange when trying to register a payment in another currency than the base currency. The base currency MUST be EUR

Use base amount for authorisations [store view] No
 Set this to yes to use base amount as authorize amount instead of currencyamount

Skip fraud detection [store view] No
 Sometimes magento incorrectly marks an order as fraudulent. this happens more often when using different currencies. Set this to yes to skip fraud detection.

Image style [store view] Classic
 Select whether you want to use classic icons, or the newest up-to-date icons.

Icon URL [store view]
 URL of the payment option icons. Default URL: https://static.pay.nl/payment_profiles/50x32/#paymentOptionId#.png

PAY. Style checkout [store view] Off
 Select whether you want PAY. style applied to your checkout.

Send discount tax [store view] Yes
 Set this to NO if you have a mix of low and high vatrare products. Some pay later methods have issues when the discount has a tax amount other than the default vat categories

Cancel URL [store view] checkout/cart
 URL the customer gets send to after cancelling payment. Default URL: checkout/cart

Continued on next page >>

will never be cancelled automatically

Always use base currency [store view]

Set this to NO if you have a mix of low and high vatrate products. Some pay later methods have issues when the discount has a tax amount other than the default vat categories

Cancel URL [store view]

URL the customer gets send to after cancelling payment. Default URL: checkout/cart

Test IP Address [store view]

Forces testmode on these Ip addresses, separate ip's by comma's for multiple ip's

Select default payment option [store view]

Enable additional validation [store view]

Enable this to also apply the validation of other activated (third party) modules during the payment process.

Auto Capture [store view]

Automatically capture authorisation-transaction when creating the shipment for the order.

Register partial payments [store view]

Register partial payments

Order description prefix [store view]

Prefix the order description with a custom word

Failover Gateway [store view]

Leave this empty unless advised otherwise by PAY.

Enabling the payment methods

Go back to the PAY.nl “Settings”. Open the group “Payment Methods” and open the payment method that you want to enable. Set the setting enabled to “Yes” so the settings for the payment method are shown.

⊖ iDEAL

| | |
|---|--|
| Enabled <small>[store view]</small> | <input type="text" value="Yes"/> |
| Title <small>[store view]</small> | <input type="text" value="iDEAL"/> |
| New Order Status <small>[store view]</small> | <input type="text" value="Pending Payment"/> |
| Authorized Order Status <small>[store view]</small> | <input type="text" value="Processing"/> |
| Paid Order Status <small>[store view]</small> | <input type="text" value="Processing"/> |
| Payment from Applicable Countries <small>[store view]</small> | <input type="text" value="All Allowed Countries"/> |
| Instructions <small>[store view]</small> | <input type="text" value="Veilig betalen via uw eigen bank"/> |
| Show bankselection <small>[store view]</small> | <input type="text" value="No"/> |
| Minimum Order Total <small>[store view]</small> | <input type="text" value="1"/> |
| Maximum Order Total <small>[store view]</small> | <input type="text" value="200"/> |
| Sort Order <small>[store view]</small> | <input type="text"/> |
| Send new order email <small>[store view]</small> | <input type="text" value="After successful payment"/> |
| Disallowed Shipping Methods <small>[store view]</small> | <div style="border: 1px solid #ccc; padding: 5px;"> <p>Flat Rate [flatrate] Fixed</p> <p>Best Way [tablerate] Table Rate</p> <p>Free Shipping [freeshipping] Free</p> </div> <p style="font-size: small; margin-top: 5px;">Hold CTRL button to select/deselect multiple</p> |
| Show for companies <small>[store view]</small> | <input type="text" value="Both"/> |
| | Allow payment method to be used for companies, private, or both. |

Here you can set the settings for the payment method. If you can't enable a payment method, make sure it is enabled.

With credit cards it can take up to 2 weeks before you can enable the payment method, this is because we need to setup a connection with our acquirer before credit cards can be used.

When you have set up all payment methods, click "Save Settings". Now the cache needs to be flushed again.

You are now ready to receive payments with your webshop!
