Overview

Braintree PHP SDK Version: 3.22.0

Braintree JS SDK Version: 3.32.0

This version of the module is compatible with -

- Magento 2.2.x.
- Magento 2.3.x

PayPal Credit

Technical notes

The UK Calculator runs a cron job every day at midnight to retrieve the available financing options from the PayPal Credit API for each product. The values retrieved are then cached within Magento until the cron runs again.

These values are used to display the finance calculator on individual product pages, and the "from £x.xx with PayPal Credit" banners on category pages. Until these values have been retrieved - this sections will not be shown.

When the user is in the cart, a request is made to the PayPal API to retrieve the available finance options in real time, for the total value of the user's cart.

Admin Configuration

- 1) Navigate to: Stores -> Configuration -> Sales -> Payment Methods
- 2) Ensure your "Merchant Country" is set to US or UK
- 3) Click "Configure" next to the Braintree option
- 4) Ensure the "Basic Braintree settings" have been configured
- 5) Select "Yes" next to the "Enable PayPal through Braintree" option
- 6) The option "Enable PayPal Credit through Braintree" will then appear below the "Enable Paypal" option - Select "Yes" next to this option (defaults to "Yes")

Note: PayPal Checkout must be enabled on the Magento Store before the merchant is able to enable PayPal Credit.

Once saved remember to flush the Magento Cache (System -> Cache Management).

US Configuration

When the PayPal Checkout method is turned on, *PayPal Credit will be turned on by default.* The merchant is able to turn of PayPal Credit through the configuration options in the Magento Admin.

No banners are displayed on the merchant's site.

Enable Card Payments
[website] Yes

Enable PayPal through Braintree
[website] Yes

Enable PayPal Credit through Braintree
[website] Yes

PayPal Credit is currently only available in the United States and United Kingdom. PayPal Credit will be disabled if the selected value for the Merchant Country field is not US or UK.

Enable Vault for Card Payments
[website] Yes

UK Configuration

For UK stores, there is an additional section titled "PayPal Credit through Braintree", further down the page. The merchant should enter their

1. PayPal API Client ID
1. PayPal API Secret
2. Braintree Activation Code
3. Merchant name as on the FCA Register - this value is displayed on the frontend credit calculator

PayPal Credit will be forcibly disabled for the UK unless the "Braintree Activation Code" field contains a valid value. PayPal will provide merchants with the activation code.

☑ PayPal through Braintree

☑ PayPal Credit through Braintree

PayPal Credit is currently only available in the United States and United Kingdom, and must have been enabled on your PayPal account.

PayPal REST Client ID [website]

PayPal REST Secret [website]

Sort Order [website]

Activation Code [store view]

This will be provided by PayPal as part of the onboarding process. Without an activation code, PayPal Credit will be disabled.

Merchant Name on the FCA Register [store view]

It is a legal requirement in the UK to display your merchant name as on the FCA Register next to the breakdown of credit options. If this field is empty, PayPal Credit will be disabled.

PayPal Express Checkout

The module has been updated to use PayPal Express Checkout button, through the Braintree API.

<https://developer.paypal.com/docs/integration/direct/express-checkout/integration-jsv4/>

PayPal Button

The PayPal button will display on the Product Page, Mini-Cart, Cart Page and Checkout - the colour, shape, size and layout of the button can be modified in each location.

To enable the PayPal button on the product page, the merchant must set the option "Enable PayPal Buy Now button on the product" in the Magento admin to "Yes".

Additional Admin Configuration Options

The Merchant is able to configure the following additional options within the Magento Admin for PayPal Checkout -

- Payee Email (configurable on a store level within the Magento Admin)
- Button Shape (Available options: Pill & Rectangle)
- Button Color (Available options: Blue, Black, Gold, Silver)

The Payment Action “Authorize and Capture” has been replaced with “Intent Sale”.

Payee Email [store view]

Checkout flow changes

Previously upon clicking the PayPal Checkout button and completing the PayPal Checkout flow customers were taken back to the Magento checkout to click an additional “Place Order” button.

GENE have added the `commit:true` flag to the PayPal checkout button to remove this step and so the order will be placed as soon as the customer clicks “Pay Now” within the PayPal Checkout window.

Error Messages

Previously customers were presented with an error message "An error occurred on the server. Please try to place the order again." when the transaction was declined (due to whatever reason).

This error message has been changed to "Your payment could not be taken. Please try again or use a different payment method".

The additional capability has been added to provide more detailed error messages based on the response from the Braintree API. At this point, no additional error messages have been added - pending clarification on what (if any) should be added. These additional error messages are based on the data within `\Braintree\Result\Error::$message`.

Payment Method

● Credit Card

 Your payment could not be taken. Please try again or use a different payment method. Payment instrument type is not accepted by this merchant account.

Google Pay

Admin Configuration

1. Navigate to: Stores -> Configuration -> Sales -> Payment Methods
2. Click "Configure" next to the Braintree option
3. Ensure the "Basic Braintree settings" have been configured
4. Expand the "Google Pay through Braintree" section
5. Select "Yes" for the "Enable Google Pay through Braintree" option.

Note: [the merchant must enable Google Pay](#) within the Braintree Control Panel and request [production access to Google Pay from Google](#).

The Google Pay button is displayed in the mini-cart and checkout.

The screenshot shows the Braintree admin configuration interface. On the left is a vertical sidebar with navigation icons for Dashboard, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, System, and Find Partners & Extensions. The main content area is titled "Configuration" and contains a "Save Config" button in the top right corner. The "GooglePay through Braintree" section is expanded, showing the following settings:

- Enable GooglePay through Braintree** (website): A dropdown menu set to "Yes". Below it is a note: "Consult the Braintree documentation when enabling Google Pay for production."
- Payment Action** (website): A dropdown menu set to "Authorize".
- Merchant ID** (store view): An empty text input field. Below it is the text: "Your MerchantID, provided by Google."
- Accepted Cards** (website): A list of card types: Visa, MasterCard, AMEX, Discover, and JCB. The "Visa" option is currently selected and highlighted.

Below the Google Pay section, the "PayPal through Braintree" section is partially visible.

Apple Pay

Admin Configuration

6. Navigate to: Stores -> Configuration -> Sales -> Payment Methods
7. Click "Configure" next to the Braintree option
8. Ensure the "Basic Braintree settings" have been configured
9. Expand the "ApplePay through Braintree" section
10. Select "Yes" for the "Enable ApplePay through Braintree" option.

Note: the merchant must validate their domain within the Braintree Control Panel. Descriptive text has been added below this option to indicate this - "You need to [verify your domain](https://developers.braintreepayments.com/guides/apple-pay/configuration/javascript/v3) name in your Braintree account first". This links to: <https://developers.braintreepayments.com/guides/apple-pay/configuration/javascript/v3>

The merchant can also enter their "Merchant Name" which is displayed in the Apple Pay dialog, before the final total.

The screenshot shows the Braintree Configuration page. On the left is a sidebar with navigation options: DASHBOARD, SALES, CATALOG, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The main content area is titled "Configuration" and has a "Save Config" button in the top right. Below the title is a "RECOMMENDED SOLUTIONS:" section. The first solution is "PayPal Express Checkout" with a "Configure" button. The second is "Braintree" with a "Close" button. Below these are "Configuration Details" sections: "Basic Braintree Settings" (with "Enable this Solution" set to Yes, "Enable PayPal through Braintree" set to No, and "Vault Enabled" set to No), "Advanced Braintree Settings", "Country Specific Settings", and "ApplePay through Braintree" (with "Enable ApplePay through Braintree" set to Yes and a note: "You need to verify your domain name in your Braintree account first."). At the bottom, there is a "Merchant Name" field containing "My Company" with a note: "Displayed to the customer in the Apple Pay dialog."

Virtual Terminal

The Virtual Terminal can be found under the "Sales" menu item in the Magento Admin. Access to the Virtual Terminal is only available to the admin users who have the "Create Sales" permission.

The Virtual Terminal allows a Magento admin user to enter Card details and an amount to charge. No invoice or order is created within Magento.

Custom Fields

Braintree documentation reference:

<https://articles.braintreepayments.com/control-panel/custom-fields>

Due to the nature of custom fields (and that they often require dynamic values to be passed through), GENE have built in functionality to allow developers to easily add custom fields. GENE have produced an example Magento 2 module available on GitHub (<https://github.com/genecommerce/module-braintree-customfields-example>) that demonstrates how to implement a custom field in the Magento 2 module.

Note: there are no admin configuration options available for Custom Fields.

Advanced Fraud Rules

Build in skip advanced fraud rules checking to allow merchants flexibility over what transactions get evaluated by Kount (based on dollar amount for instance)

An option has been added within the “Advanced Braintree Settings” section in the Magento Admin, labelled “Bypass Fraud Protection Threshold”.

Any transactions with a value equal to or higher than this defined setting will have the skip advanced fraud rules flag (""skipAdvancedFraudChecking) set against the transaction when submitted to the Braintree API. Note: Setting this value to 0 will disable this option.

⌂ Advanced Braintree Settings

Vault Title
[website]

Merchant Account ID
[website]

If you don't specify the merchant account to use to process a transaction, Braintree will process it using your default merchant account.

Advanced Fraud Protection
[website]

Be sure to Enable Advanced Fraud Protection in Your Braintree Account in Settings/Processing Section

Bypass Fraud Protection Threshold
[website]

Advanced fraud protection checks will be bypassed if this threshold is met or exceeded. Leaving this field blank will disable this option.

Transaction Source

The Braintree Transaction Source has been added to the Magento Admin’s Sales Order grid. The additional column can be shown or hidden by the merchant using the “Columns” setting.

	ID	Purchase Point	Purchase Date	Bill-to Name	Ship-to Name	Grand Total (Base)	Grand Total (Purchased)	Status	Payment Method	Braintree Transaction Source	Action

Payment from Applicable Countries [website]

'DisplayName' Parameter

An option labelled “Override Merchant Name” has been added to the “PayPal through Braintree” configuration section in the Magento admin. This value is then passed through with the ‘DisplayName’ parameter on the PayPal button.

'PayeeEmail' Configuration

An option labelled “Payee Email” has been added to the “PayPal through Braintree” configuration section in the Magento admin. This value is then passed through with the 'PayeeEmail' parameter on the PayPal button.

Note: You should consult Braintree Support before modifying this option.

PayPal through Braintree

Title (store view)
It is recommended to set this value to "PayPal" per store views.

Vault Enabled (website)

Payment from Applicable Countries (website)

Payment from Specific Countries (website)

Require Customer's Billing Address (website)
This feature needs to be enabled first for the merchant account through PayPal technical support.

Allow to Edit Shipping Address Entered During Checkout on PayPal Side (website)

Debug (website)

Display on Shopping Cart (website)
Also affects mini-shopping cart.

Payee Email (store view)

3D Secure for vaulted cards

If the merchant has enabled 3D Secure, the customer will be prompted to go through the 3D Secure verification process with vaulted cards in the checkout.

Multi-Currency Handling

Magento supports the ability for Merchants to;

- 1) Set up different websites with different currencies and prices for products

-
- 2) Enable different currency display options, whereby the customer is still charged in the base currency (eg USD), but can opt to display the prices in another converted currency (eg EUR) on the website.

Merchants should ensure the currency setup on their Braintree and PayPal accounts is the same as that of the 'base' currency as configured in Magento. The merchant is able to change the Braintree API Merchant Account ID on different website levels within Magento to ensure the customers are charged in the correct currency.

Equally, by utilizing the additional options within Magento to change how the currency is displayed the merchant is able to display multiple currencies but ensure the customer is charged in the base currency configured in their Braintree/PayPal accounts.
