

Popup Login v2.x Developer's Guide & API Reference for Magento 2

From Plumrocket Documentation

Display Popup Manually

In order to configure the Popup Login Extension for a particular page element, you will have to select **"Manually"** for the option **"Display Popup"** in the extension settings as shown below.

The screenshot shows the Magento 2 Configuration interface. On the left is a sidebar with navigation icons for Dashboard, Sales, Products, Customers, Marketing, Content, Plumrocket, Reports, and Stores. The main area is titled 'Configuration' and shows the 'Plumrocket' extension settings for 'Popup Login'. The 'Display Popup' dropdown menu is highlighted with a red box and set to 'Manually'. Other settings include 'Enable Extension' (Yes), 'Serial Key' (e1Hm0dwhTjJtNNPR5385ZR85N80FA2H5), and 'Allow to Close Popup' (Yes).

You will also have to add a class **"show_popup_login"** to the object to trigger the popup login.

Code Example

```
<a href="/seespecialevent" class="show_popup_login">See Special Event</a>
```

In order to display selected popup form after click on link, you need to add the parameter **data-form="registration"**.

Code Example

```
<a class="show_popup_login" data-form="registration" href="http://dev3.plumservers.com/magento2/index.php/customer/account/create/">Create an Account</a>
```

Disable Popup Manually

If you want to disable Popup only for a particular element on the page, you will have to add the parameter **data-popup="off"** to the selected element. For instance, if you want to disable Pop up for the "About Us" link, you will have to edit the code.

```
<a href="/about/">About Us</a>
```

making the following changes:

```
<a href="/about/" data-popup="off" >About Us</a>
```
