

PunchOut2Go for Magento 2 Installation Guide

Upon purchase, you will receive an API Key and the latest version of the PunchOut2Go for Magento 2 Extension. Contact [PunchOut2Go](https://punchout2go.com) if you have not received the API Key and/or the extension. The API Key is used to identify you as a company and to configure the extension.

The PunchOut2Go for Magento 2 Extension is provided as a .zip archive. This process is not unique to our extension and can be followed when installing extensions from any properly compiled archive.

Notice: Always backup prior to any installations.

1. Extract the Archive

- Copy the archive to the root of your Magento 2 project.
- The Archive will extract files to the “app/code/Punchout2go/Punchout”
- Uncompress the archive extract the module :

```
%> unzip Punchout2go_Punchout-2.1.22.zip
```

** If you are updating our module, you will want to approve overwriting existing files.

2. Enable the Module

- Enable our module by executing the magento “module:enable” command :

```
%> php bin/magento module:enable Punchout2go_Punchout
```

3. Flush, Compile, Deploy

- Depending on what mode you are in, you will need to perform a few more steps. This will clear your cache, compile your DI and deploy static files

```
%> php bin/magento cache:flush  
%> php bin/magento setup:di:compile  
%> php bin/magento setup:static-content:deploy
```

Congratulations, PunchOut2Go for Magento 2 is now installed!

Upon purchase of the service from [PunchOut2Go](https://punchout2go.com), PunchOut2Go team members will collaborate to provide one-on-one support for the implementation of the PunchOut2Go for Magento 2 solution.
