

In Order to install the Purolator Shipping Solution extension using composer, follow the following steps:

First, we need to make sure that our composer.json is configured correctly. This is the magento composer file and is located at:

```
<magento_root_install>/composer.json
```

Open the composer.json file with your preferred editor and add the extension name: version inside the require : {} node. You can find this information inside composer.json file that come with the downloaded extension from Magento Market place.

Make sure that your magento composer.json file have the required repository in order to be able to find the correct package

Save the composer.json file and run this command

```
Composer update
```

This command will connect with magento repository, to accomplish this step, make sure you have the username and password from your magento account.

After command is completed run this command

```
Php bin/magento setup:upgrade
```

After command is completed go to magento admin panel and go to

- Store -> Configuration -> Sales -> Shipping methods

If things go well you should see all configuration of Purolator Shipping methods

Now go ahead and fill in your api keys and enable shipping methods that you need for your store.
