- Review Collection Emails	2
- Product Feed	3
- Product Reviews Widget	3
- Rich Snippets	3

Extension Installation

This extension is installed via the command line, simply follow the steps below;

1. cd to Magento2 root folder
2. As the extension is hosted on packagist.org, you simply use the following command to instruct composer to fetch and install the module:
`composer require reviewscouk/reviews:0.0.2`
3. When this is complete you'll need to enable the module and run Magento's upgrade scripts as required. Simply cd to the /bin directory and run the following:
`./magento module:enable Reviewscouk_Reviews --clear-static-content`
`./magento setup:upgrade`

Extension Configuration

Basic Configuration

This extension requires a Store ID and an API key, obtained from your account area on [Reviews.co.uk](https://reviews.co.uk) or [Reviews.io](https://reviews.io). To find these details;

1. Log into your account, and navigate to *Company Setup -> Publish Reviews*
2. Then, select *Publishing API*
3. Here, you'll find your **Store ID** and **API Key** required by the module.

To configure the module, log into your Magento Administration panel (ensuring the module is correctly installed) and then;

1. Navigate to *Stores -> Configuration -> Reviews.co.uk -> Setup*
2. Select your *Region*. Reviews.co.uk customers will be UK, and Reviews.io customers will be US
3. Enter your **Store ID** and **API Key**

Store Specific Integration

The Reviews Magento extension offers a number of features - which ones you use will depend on what you're looking to achieve. Below is in a brief outline of them all, and instruction on how to configure them.

Review Collection Emails

Magento can automate the review collection process by sending customer/order data to the Reviews platform as soon as an order is completed. You can control the automated collection of Merchant and Product reviews independently by;

1. Navigate to *Stores -> Configuration -> Reviews.co.uk -> Automation -> Review Collection*
2. To enable collection of Merchant Reviews set **Queue Merchant Review** Emails to Yes
3. To enable collection of Product Reviews set **Queue Products Review** Emails to Yes

Product Feed

The product feed allows you to sync your product catalog with the Reviews platform. This feed will be available at www.your-domain.com/reviews/index/feed. To enable this;

1. Navigate to *Stores -> Configuration -> Reviews.co.uk -> Automation -> Product Feed*
2. Under *Product Feed*, set **Product Feed** to Yes.
3. When you save these settings, the URL of your feed will automatically be added to your Reviews account.

Product Reviews Widget

Automatically pull through product specific reviews directly onto your product pages. To enable this;

1. Navigate to *Stores -> Configuration -> Reviews.co.uk -> On Page Content -> Product Reviews Widget*
2. Set **Display Reviews Widget on Product Pages** to Yes
3. You can set the colour used in the widget by entering a HEX colour code into the **Widget Hex Colour** field. This code must be a valid 6 digit HEX value, with or without the leading # character.
4. This extension offers 2 types of widget, set via changing the value in the **Product Widget Version** drop down. Javascript Widget is the classic method of displaying reviews and will place an iFrame on the page with the reviews inside. The newer method, Static Content Widget, will display the reviews directly on the product page, rather than inside an iFrame. This is the preferred method as it allows search engines like Google to crawl and cache the content of the reviews.

Rich Snippets

The Reviews.co.uk Magento modules allows you to automatically include structured Rich Snippet data on your pages. This data is used by search engines to better understand the content of your pages. Search engines also often use this data to improve the content of results on a Search Engine Result Page (SERP). You can find out more information [here](#)

To enable Rich Snippets;

1. Navigate to *Stores -> Configuration -> Reviews.co.uk -> On Page Content -> Rich Snippets*
2. To enable Rich Snippets containing Merchant review data, set **Enable Merchant Rich Snippets** to Yes
3. To enable Rich Snippets containing Product review data, set **Enable Product Rich Snippets** to Yes
