If you need support or have any question, feel free to open a support ticket. The support is available in Portuguese or English.

Before doing that, check if your question is not listed in the [Knowledge Database](#) and save time.

Extension Features

This module allows you to integrate your Magento 2.3 (or newer) store with PagSeguro UOL payments.

Currently this module supports the following services/payments: Credit Card, Boleto (bank slip), TEF (Direct Debit), Redirect (which includes PIX, PagSeguro Balance, and others), and Two Credit Card.

Here are the main features you'll find in this module:

1. Credit Card Features

- Accepts all credit card types supported by PagSeguro UOL
- Transparent payment (your customer is not redirect to any external website)
- Automatic installments estimate
- Option to display installments estimate on products' pages
- Automatic detect the credit card brand and updates the installments accordingly
- Avoids "sender_hash" error on PagSeguro, common to all transparent integrations (even non-Magento integrations)
- Option to accept 2 credit cards is also available

2. Boleto (Bank Slip)

- Automatically adds the payment button to your success page, where the customer can print the Boleto

3. TEF (Direct Debit)

- Automatically remove unavailable banks from the bank dropdown
- Automatically adds the payment button to your success page, where the customer can click to be redirect to his bank

Automatic Updates

Any update on PagSeguro is automatically reflected on the orders placed with this module. You don't need to configure any notification URL.

Multi shipping

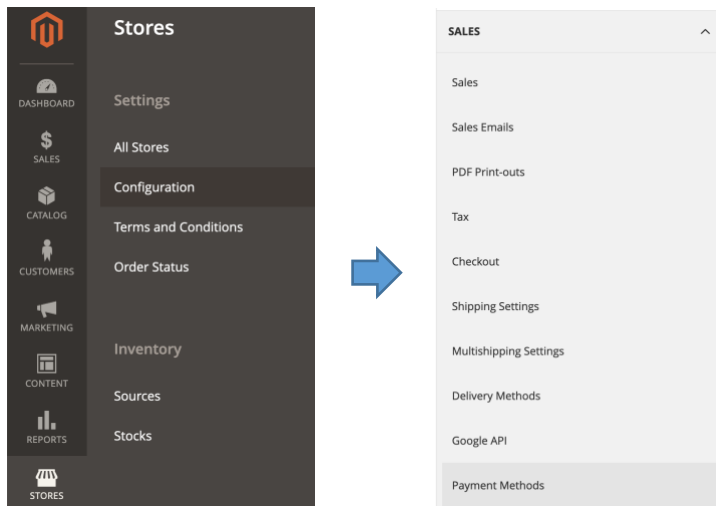

Magento **Multi Shipping is not supported** by PagSeguro and this module.

Transparent Retries

In case of a PagSeguro is down, every request is retried up to 3 times. This is transparent to customers and you.

Configuration

All the module configuration is available under Stores > Configuration > Sales > Payment Methods.

And then *Other payment methods*.
