1. Installation

- **Upload Package:** Upload the content of the module to your root folder. This will not overwrite the existing Magento folder or files, only the new contents will be added.
- **Install Extension:** After the successful upload of the package, run below commands on Magento 2 root directory.

```
composer require scommerce/core  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy
```

3. Front-end Screenshots

- **Subcategories Grid View on the Front- end**

After successfully enabling subcategories you can see them listed in a Grid view on the frontend. You can select the number of columns depending upon that the frontend will review the Grid view. To select the columns Navigate to **Catalog > Categories** and then select the category. Scroll down to **Sub-Categories Settings**. Here you will have the option to upload the thumbnail image, short description and number of columns. Please refer to the image below. Each of the subcategories will be listed with a description, background and image as defined by you.

- **Subcategories List View on the Front- end**

Navigate to **Catalog > Categories**, select the category, and then scroll down to **Sub-Categories settings**. You can select the number of columns here. Similarly display the subcategories in a list view by selecting the number of columns as "1". See the image below for reference.
