1. Introduction

Customer Price Bargain Magento 2 Extension allows to bargain on the product prices thus motivating them to make more purchases. After all, offering good customer experience is of utmost importance in the ecommerce platform.

This Magento extension allows you to configure various parameters such as the lowest price limit, accept or reject message when the bargain offer is accepted or rejected, maximum limit on the number of bargain request that can be made, this makes the whole bargaining very conversational and in your best interest. This extension provides the flexibility to enable this price negotiation facility for specific products. Charity and donation feature can be added to the site so visitors can enter the amount they would like to donate. Appealing design and compatibility with most product types (simple, virtual, digital) can be leveraged by admin to attract & boost more sales to site.

Features

- **Lowest price limit** can be configured
- **Customization of messages** makes the customer feel more approachable
- **Requests to accept or reject** the customer bargain can be configured
- **The maximum limit on the number of bargain request** can be configured
- **Bargain for specific products** can be configured.
- **Customization of the bargain widget** is possible

2. Extension Configuration

Customer Price Bargain Magento 2 Extension set up:

1. Install the Customer Price Bargain extension from the market place.
2. To use the extension, go to STORE> Configuration > SETUBRIDGE >Price Bargain Tab.

Customer Price Bargain Magento 2 Extension Configuration:

1. General configuration: In the Customer Price Bargain tab, you can configure whether the extension has to be enabled or disabled. Also whether the bargain interface will be pop-up or a static form embedded in the product detail page.

The image shows two overlapping screenshots from a Magento 2 admin interface. The left screenshot is the 'Configuration' page, specifically the 'General' tab for the 'Customer Price Bargain' extension. It features two dropdown menus: 'Enable [store view]' set to 'Yes' and 'Display Popup [store view]' set to 'No'. An orange callout box with the text 'Enable/disable extension from here' points to the 'Enable' dropdown. A 'Save Config' button is visible in the top right. The right screenshot is a product detail page for a 'Test' product, priced at '\$122.00'. It shows a 'Price Bargain' button, a quantity selector set to '1', and an 'Add to Cart' button. The product is marked as 'IN STOCK' with SKU# 'test'. A search bar and navigation links are visible at the top of the product page.

2. Price Bargain Request setting: Here, you can set the price negotiation related settings in terms of the number of requests that can be made, if this field is left blank the customer can try for unlimited number of attempts. The admin can also set messages when the price requested by the customer is accepted or rejected. An error message can also be set when the maximum attempts is exceeded.

Pricebargain Setting

Select price bargain widget position on product page

CPB Widget Position [store view] ▼
 Select CPB widget position on product page

Enter allowed Maximum Attempts

Allow Maximum Attempts [store view]
 If this is blank then user can try unlimited time

Enter message if price is accepted

Message When Price Accepted [store view]

Enter error message if price is rejected when price is less than allow

Message When Price Rejected [store view]
 when bargain price is less than minimum price

Enter error message if price is rejected when price is greater than allow

Message When Price Rejected [store view]
 when bargain price is greater than product price

Enter error message if price is rejected when maximum try attempts exceed

When Maximum Attempts Exceed [store view]

3. Product based setting: You can fill out the specific product information for which you want the bargaining functionality and also set the related information in terms of the product price, tax class, quantity, stock status, weight, categories and visibility.

The image shows a screenshot of a product configuration form with several fields and callout boxes. The callout boxes are orange and contain the following text:

- Select Yes to Enable Product**: Points to the "Enable Product" radio button.
- Select Attribute Set**: Points to the "Attribute Set" dropdown menu.
- Enter Product Name**: Points to the "Product Name" text input field.
- Enter Product SKU**: Points to the "SKU" text input field.
- Enter Product Price**: Points to the "Price" text input field.
- Select Tax Class**: Points to the "Tax Class" dropdown menu.
- Enter Product Quantity**: Points to the "Quantity" text input field.
- Select Product Stock Status**: Points to the "Stock Status" dropdown menu.
- Enter Product Weight**: Points to the "Weight" text input field.
- Select Product of Categories**: Points to the "Categories" dropdown menu.
- Select Product Visibility Front-End**: Points to the "Visibility" dropdown menu.

The form fields and their values are:

- Enable Product: Yes
- Attribute Set: Default
- Product Name: Test
- SKU: test
- Price: \$ 122.00
- Tax Class: None
- Quantity: 11108
- Stock Status: In Stock
- Weight: 0.1 lbs
- Categories: Test Category
- Visibility: Catalog, Search

You can also set the minimum price limit for the product.

3.Price Bargain In Front End

How does it work?

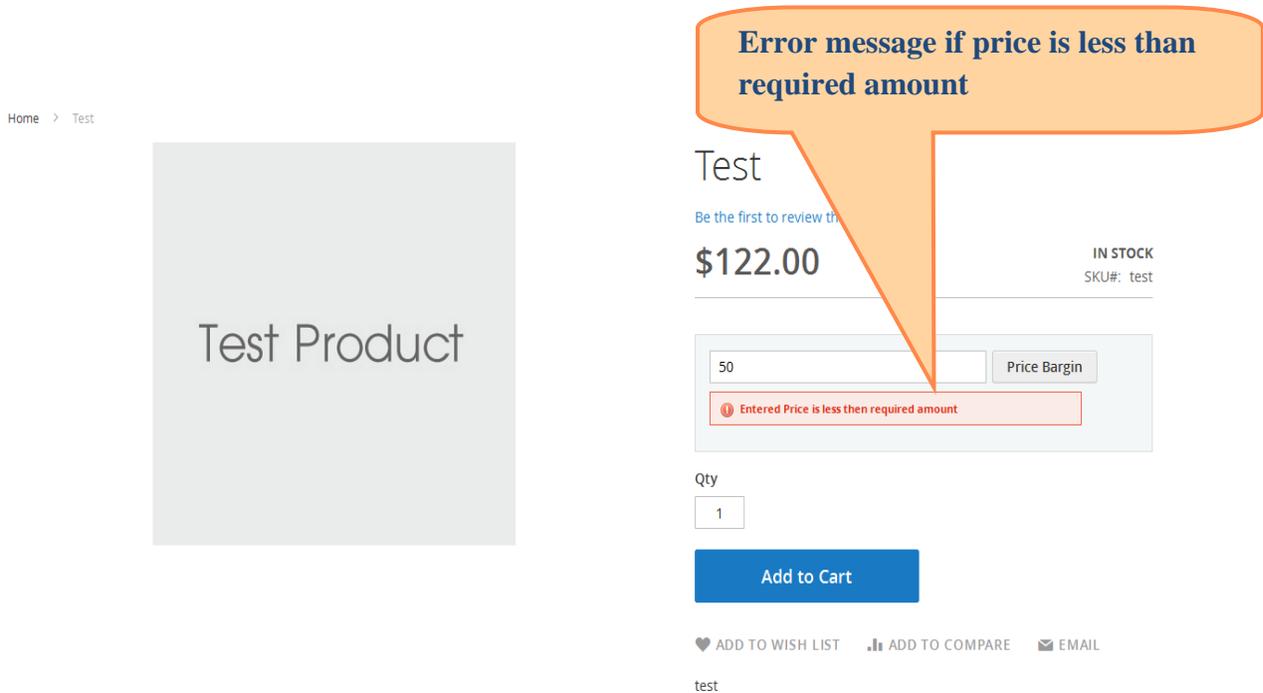

1. The bargain interface will be pop-up in the product detail page.

1. When the customer sends out price bargain request several times and exceeds the limit set, an error message is sent out.

2. The customer first sends the request for the price bargain. If the price requested is too low, a message is sent back to the customer.

3. An error message is also displayed when the customer enters price greater than the required amount.
