1. Introduction

The spambots, as well as fake users, can cause a great deal of damage to your website as it makes it difficult for you to identify your actual users, leading to a long-term impact on your vision of the project.

The easiest way spammers enter your website is through fake registration. To effectively address this problem, SetuBridge has come up with the Spam Customers Protection Extension. With this fake registration avoiding extension, you will be able to successfully restrict the registration of fake or spam customers by blocking their registration using foolproof tricks to keep your store clean and secure. Our extension is capable of avoiding registration Russian and Chinese users through programmatic validation.

So, if you are looking to boost the security of your store by keeping spam users and bots at a distance, Spam Customers Protection Extension for Magento 2 by SetuBridge is the ideal solution.

Features

- The module identifies lists and configures domains to secure your website from spam users.
- Admin can also identify and block specific characters through backend configuration.
- The Spam Customers Protection extension allows you to deploy the honeypot validation to your store.
- The extension allows blocking users by the introduction of character limit for the name field.
- We also provide security by activation of blocks against well known Chinese and Russian spambots attacks.
- Static message for signup restriction

2.Extension Configuration

The screenshot shows the 'Spam Customers Protection' configuration page in a Magento store. The page is titled 'Configuration' and has a sidebar with various menu items. The main content area contains several settings for spam protection, each with a dropdown menu and a 'Use system value' checkbox. Five orange callout boxes highlight specific features:

- Store>configuration>SETUBRIDGE> Spam Customer Protection**: Points to the top of the configuration page.
- Enable / Disable extension from**: Points to the 'Enable' dropdown menu.
- Enable honey pot validation**: Points to the 'Enable Honeypot Validation' dropdown menu.
- Name character limit**: Points to the 'Firstname Charcter Limit' and 'Lastname Charcter Limit' input fields.
- Specific bot protect**: Points to the 'Protect against specific bots' section, which lists 'Chines Spam Attack' and 'Russian Spam Attack'.
