Important:

- We recommend you to duplicate your live store on a staging/test site and try installation on it in advance
- Backup Magento files and the store database

It's very important to backup all of the themes and extensions in Magento before installation, especially when you are working on a live server. We strongly recommend you to do not omit this step.

Installation guide

How to install**Step 1:**

Download the Package from Magento marketplace.

Step 2:

Unzip the file.

Step 3:

Upload the extension directory to app/code/ directory of your Magento installation. The root directory of Magento is the directory that contains the directories "app". All directories should match the existing directory structure.

Step 4:

Open command prompt and execute following commands

```
php bin/magento setup:upgrade
```

```
php -dmemory_limit=5G bin/magento setup:static-content:deploy -f en_US
```

```
php bin/magento indexer:reindex
```

```
php bin/magento cache:clean
```

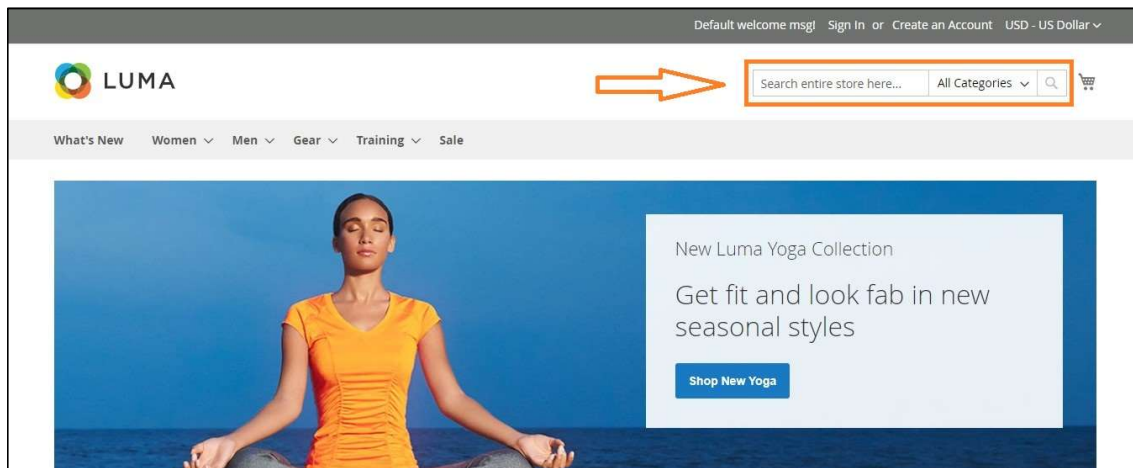

```
php bin/magento cache:flush
```

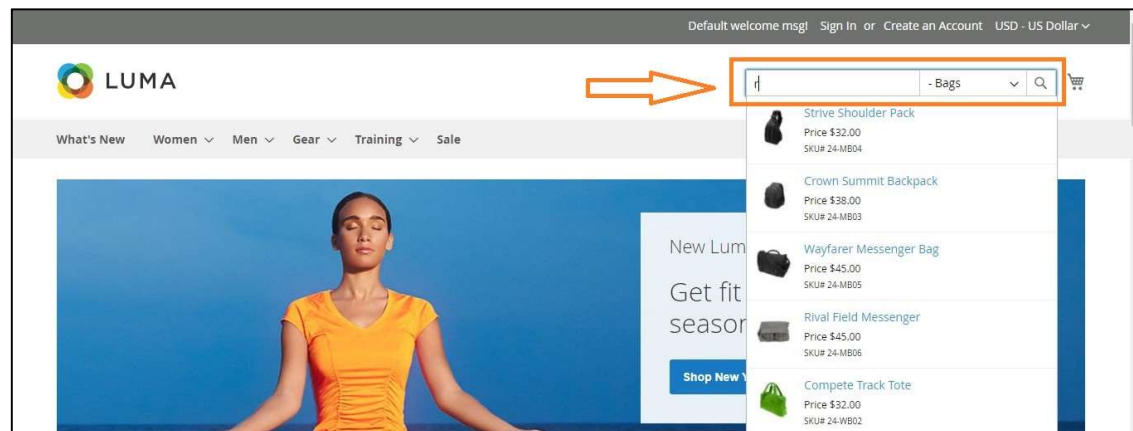

User guide

How to Use

Our quick search extension will help to improve the searching functionality of your store, your customer can find product in seconds and save their time. You can customize this extension through the admin panel (backend).

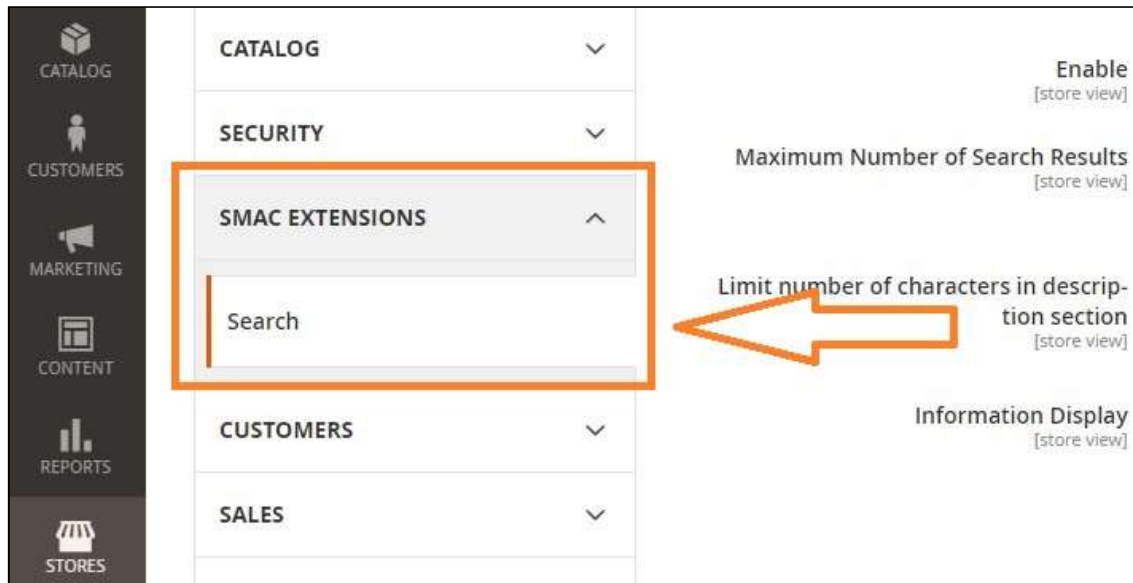

Customers are able to enter the character of product name on this box to search their preferred product. Customers can search products from sub-categories also.

How to Configure

To configure search, go to 'Admin -> Stores -> Settings -> Configuration -> SMAC Extensions -> Search'.

General Settings

General

Enable [store view] Yes

Maximum Number of Search Results [store view] 10
By Default, it shows 10 search results

Limit number of characters in description section [store view] 97
Limit the length of short description

Information Display [store view]
-- Please select --
Price
Image
Short Description
SKU

Reindex Search database [store view] After Product Save
After product save option is good choice for store has less than 3,000 products. If your store has more than 3,000 SKUs, you should switch to Cron job, it runs daily at 0AM your server time.

Enable: You can enable module by selecting “Yes” option from drop-down.

Maximum Number of Search Results: Number of search result(s) you want to show in the search result grid, default value is 10.

Limit number of characters in description section: Indicates the maximum character of a product’s short description that display on Search Result pages.

After changing this field value, click on “Save Config”, “Reindex Search Data” to apply changes on the frontend.

Information Display: Selected field information will display on search result pages.

Reindex Search Database: select one of the following:

Cronjob: If your store has more than 3,000 SKUs, you should choose Cron job, it runs daily at 0AM your server time.

After Product Save: This option is a good choice for store has less than 3,000 products

Manually (used reindex button below): You have to click Reindex button everytime product's information changes.

Search by category configuration

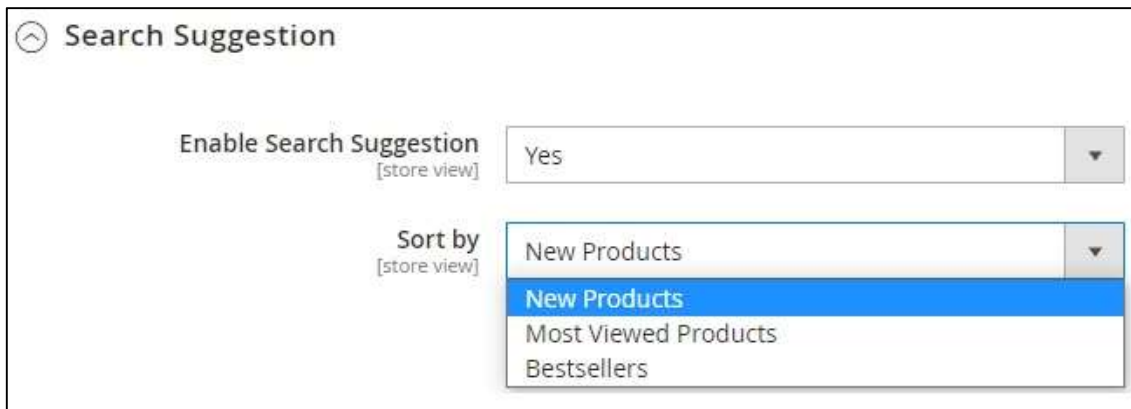

The screenshot shows a configuration panel titled "Search by category configuration". It contains two settings: "Enable Search By Category" with a dropdown menu set to "Yes", and "Maximal Depth" with a text input field containing the number "2". Both settings have a "[store view]" label below them.

This field allows customer the ability to search by Product and Category's name.

Enable Search by Category: Choose "Yes" to display Category search on the frontend. At that time, Maximal Depth will be shown in the backend.

Maximal Depth: The entered number represents the level of displayed Category in the search box.

Search Suggestion

The screenshot shows a configuration panel titled "Search Suggestion". It contains two settings: "Enable Search Suggestion" with a dropdown menu set to "Yes", and "Sort by" with a dropdown menu showing "New Products", "Most Viewed Products", and "Bestsellers". The "Sort by" dropdown is currently open, and "New Products" is selected. Both settings have a "[store view]" label below them.

Enable Search Suggestion: Choose "Yes" to allow products displaying when customers click on the search box.

Sort By: *Only display this field if Enable Search Suggestion = Yes, *There're 3 types to sort the products: New Product, Most View Products, and Bestsellers.

Business case

If you compare search extension to other existing search extension on the market, it's clear to see that smac feedback extension is quite unique. Here's why...

1. Very easy and fast configuration
2. Configurable search box
3. Optimize autocomplete search results
4. Works smoothly for large scale of products
5. Admin can set limit on search results in display
6. Responsive UI and an enhanced user experience
7. Multiple language supported
