

# Ajax Newsletter

## Installation/User Guide

**Installation Process:**

**Note:** Please take a backup of your all Magento files and database before installing or updating any extension.

**Extension Installation:**

- Download the Ajax Newsletter .ZIP file from the Magento account.
- Log in to the Magento server (or switch to) as a user, who has permission to write to the Magento file system.
- Create folder structure **/app/code/Solwin/AjaxNewsletter/** to your site root directory
- Extract the contents of the .ZIP file to the folder you just created
- Navigate to your store root folder in the SSH console of your server:
- Run upgrade command as specified : **php bin/magento setup:upgrade**
- Run deploy command as specified : **php bin/magento setup:static-content:deploy -f**
- Clear the cache either from the admin panel or command line **php bin/magento cache:clean**
- Now, you can view the Solwin menu in the admin panel. Please go to **Solwin -> Ajax Newsletter -> Configuration** and select **Enable** to Yes.
- Change/Set all other options as per your requirements and save settings.

**Overview:**

Ajax Newsletter Magento 2 extension helps the customers/visitors to subscribe newsletter on-site without page refresh. Normally when customers subscribe an email, the website will be reloaded. It is not convenient. So that to tackle this problem we provide Ajax Newsletter extension.

**Key Features:**

The extension provides below features:

- Provides a fully customizable interface of the extension from the admin control panel that is easily manageable.
- Submit the newsletter without loading the whole page.
- Ability to enable/disable extension from the admin control panel.

- Extension allows to set success, error, and invalid email address messages.

### Admin control panel:

In the admin control panel, from **Solwin >> Ajax Newsletter >> Configuration** menu, our extension allows store owners to enable or disable the module in store.

#### General

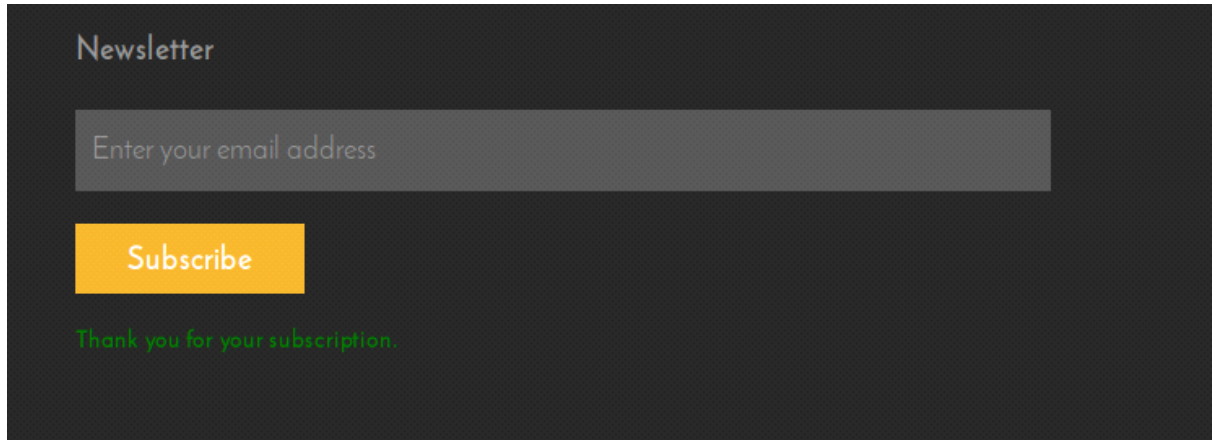

<b>Enable</b> [store view]	<input type="text" value="Yes"/>
	Select Yes to enable Ajax Newsletter module on frontend.
<b>Success Message</b> [store view]	<input type="text" value="Thank you for your subscription."/>
	Set Success Message
<b>Error Message</b> [store view]	<input type="text" value="There was a problem with the subscription."/>
	Set Error Message
<b>Invalid Email Address Message</b> [store view]	<input type="text" value="Please enter a valid email address."/>
	Set Invalid Email Address Message

- **Enable:** Yes | No.
- **Success Message:** Enter Success message (This message will be displayed when the user subscribes to the newsletter successfully).
- **Error Message:** Enter error message (This message will be displayed when there is an error in the newsletter subscription).
- **Invalid Email Address Message:** Enter an invalid email address message (This message will be displayed when the user enters an invalid email id for a subscription).

### Customer View:

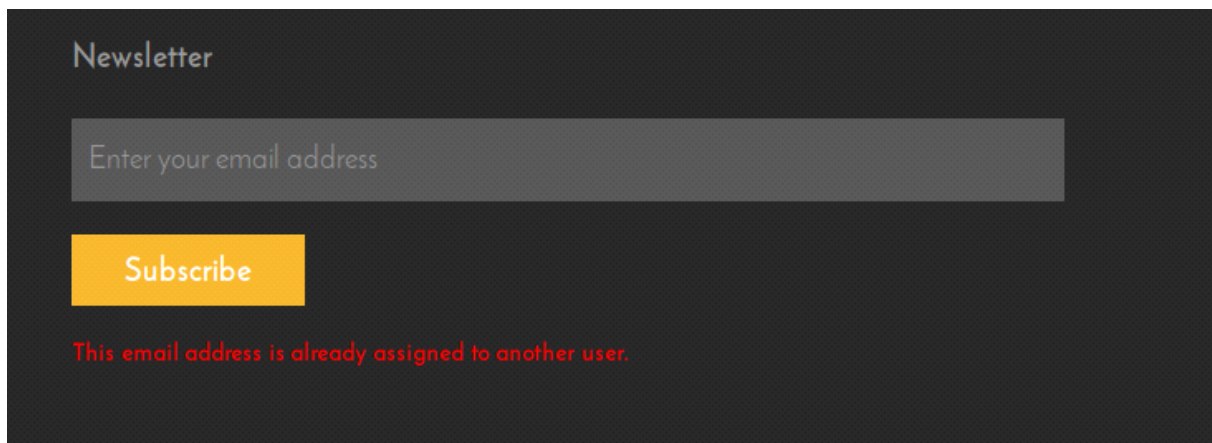

In the front end, the customers can view the subscribe newsletter text box in footer, and customers can subscribe newsletter using Ajax.

After successfully subscribe it displays thank you message like 'Thank you for your subscription'.

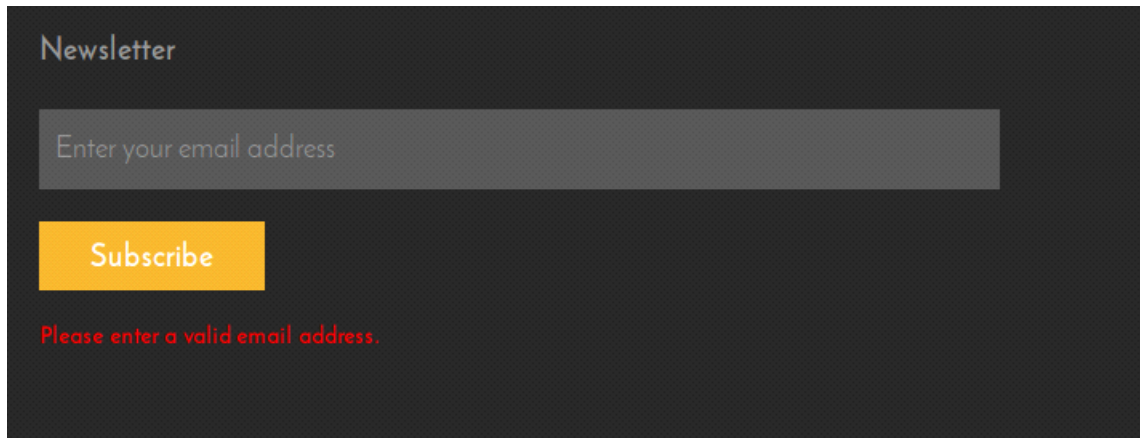

A screenshot of a dark-themed newsletter subscription form. At the top left, the word "Newsletter" is displayed in a light grey font. Below it is a wide, light grey input field with the placeholder text "Enter your email address". Underneath the input field is a bright yellow rectangular button with the word "Subscribe" in white text. At the bottom of the form, a green message reads "Thank you for your subscription."

If the customer already exists then it displays a message like 'This email address is already assigned to another user.'

A screenshot of a dark-themed newsletter subscription form, similar to the one above. It features the "Newsletter" title, the "Enter your email address" input field, and the yellow "Subscribe" button. However, instead of a success message, a red error message is displayed at the bottom: "This email address is already assigned to another user."

If the customers enter an invalid email address then it will validate the email address format and gives an error message like 'Please enter a valid email address.'
