

Stamped.io Reviews Module for Magento 2 (Installation Guide)

Install Stamped.io Plugin

1. Download the module as zip file
2. Unzip it and place it in app/code folder then use terminal to go to Magento root and give 777 permission to var, pub folder then run setup upgrade command :php bin/magento setup:upgrade then again give 777 permission to var, pub folder

Insert Star Rating Badge in Category Pages

To add star ratings on Category page, add the following code to this file: /vendor/magento/module-catalog/view/frontend/templates/product/list.phtml

```
<span class="stamped-product-reviews-badge" data-id="<?php echo $_product->getId() ?>" style="display: block;"></span>
```

Install Product Rich Snippets

To include product rich snippet in the Magento 2 platform, your store needs to have a set of product schema codes present in the site, which can be custom-developed or rendered by an SEO app that provides the codes, as Magento 2 does not support any structured data by default. Once the product schema is present, please install the following set of codes:

```
<script>

function addEventListenerStamped(e1, eventName, handler) {

if (e1.addEventListener) { e1.addEventListener(eventName, handler); }
else { e1.attachEvent('on' + eventName, function () { handler.call(e1); }); }

}

addEventListenerStamped(document, 'stamped:reviews:loaded', function(e) {
var ratingCount = jQueryStamped('meta[itemprop="reviewCount"]').attr('content');
var ratingValue = jQueryStamped('meta[itemprop="ratingValue"]').attr('content');

var richSnippet = {
"@context": "http://schema.org",
"@type": "Product",
"@id": "HTTPS://STORE.COM/URL/#product"
}

if (parseInt(ratingValue) > 0){
richSnippet.aggregateRating = {
"@type": "AggregateRating",
"ratingValue": ratingValue,
"reviewCount": ratingCount
}
}

var script = document.createElement('script');
script.type = 'application/ld+json';
script.innerHTML = JSON.stringify(richSnippet);
document.getElementsByTagName('head')[0].appendChild(script);
});
</script>
```

You will then need to include the same "@id" field in the product schema code present within the theme file, to link the two sets of codes together:

```
"@id": "HTTPS://STORE.COM/URL/#product"
```

You can make use of Google's tool, such as GSDT (<https://search.google.com/structured-data/testing-tool/u/0/#>) to confirm the placement of the codes is correct. You should see the aggregateRating field rendering within the product schema, on product pages which contains reviews:

aggregateRating	
@type	AggregateRating
ratingValue	4.73
ratingCount	22
bestRating	5
worstRating	1
itemReviewed	
@type	Thing
name	Goat Mug 16oz (473mL)
offers	
@type	Offer
