

StoreSpot Retargeting

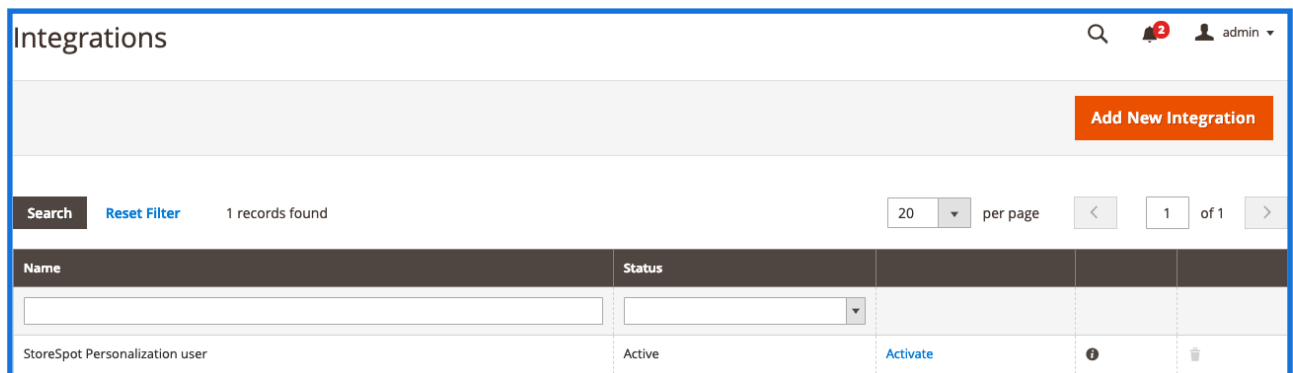

- Installation Guide -

Configuring the StoreSpot extension

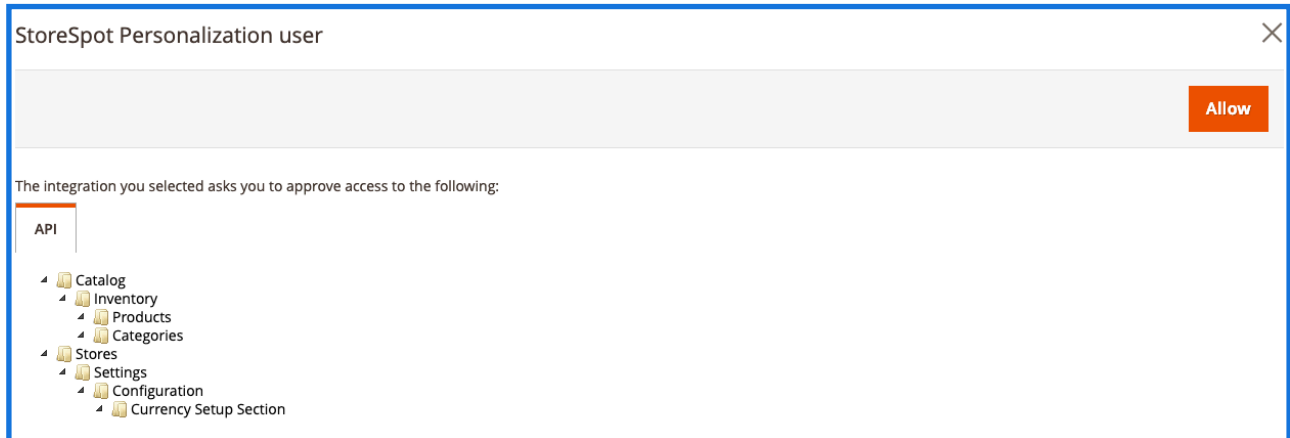

1. After installing the StoreSpot extension for Magento 2, you will find a “StoreSpot Personalization user” under “System > Extensions > Integrations”

2. When the extension is installed for the first time, you can activate the integration by clicking on “Activate”. The integration can be reauthorized at any time on this page.

- By clicking on "Allow", you will be redirected to the StoreSpot application. When you have no StoreSpot account yet, you can create one. Otherwise, you can login on this screen. Once you are logged in, the StoreSpot application will configure the integration automatically and the window will close itself.

- The integration has been setup successfully. This is assured in your Magento 2 admin area when the StoreSpot Personalization user has an Active status.

Name	Status	
<input type="text"/>	<input type="text"/>	
StoreSpot Personalization user	Active	Reauthorize

IMPORTANT!

You still have to setup your account in the StoreSpot application itself on <https://app.storespot.io>.

The plugin ensures communication between StoreSpot and your online store. All settings and campaigns can be found directly in the StoreSpot application.
