

USER GUIDE

Automatic In-Stock
Status Update

INTRODUCTION

“Automatic In-Stock Status Update extension” enhances the customers experience and makes your store more user-friendly! It changes the 'Stock Availability' to 'In Stock' when the quantity field is greater than zero and automatically changes it to 'Out of Stock' when the quantity is zero. It also works,when product is returned to stock. It would provide a way to set it back to 'In Stock' when you set the quantity greater than zero.

Automatic In-Stock Status Update extension helps customers to avoid changing the 'Stock Availability' field's value each time you save the product or return a product to stock. Additionally, it automatically changes to 'In Stock' or 'Out of Stock' according to product's quantity. Henceforth it is very useful and enhances the customer's experience.

STEP 1 - INSTALL EXTENSION

1. Download and unzip the extension file which you received after purchase.
2. Upload the unzipped folders to the Magento root folder.
3. Go to "System", then "Cache Management".

This is a demo store. Any orders placed through this store will not be honored or fulfilled.

6. Log out of Magento and log in to your Magento backend again.

7. Go to "System", then "Configuration". Under "Sunarc" Tab, click on "Automatic In-Stock Status Update" and enable extension.

The screenshot shows the Magento Admin Panel interface. The top navigation bar includes 'System' and 'Configuration'. The left sidebar shows the 'Configuration' menu with 'Automatic in-stock status update' selected. The main content area displays the configuration for 'Automatic in-stock status update', with the 'Enable' dropdown menu set to 'Yes'. A red arrow points to the 'Yes' option with the text 'Enable extension'. Another red arrow points to the 'Automatic in-stock status update' option in the left sidebar.

COMMON ISSUES DURING INSTALLATION

After I Installed the Extension, the Store Gives an Error or Blank Page:

- Change the owner of the extracted extension files to the web server user and set 775 permissions on them.
- Clear the store cache and try again.

How to Clear Your Cache:

- After installing or uninstalling extensions, it is recommended to clear your cache. It is more preferable to flush your Magento store cache by deleting all the content in `/var/cache/`.
- You can clear it via Backend -> System -> Cache Management: select all cache types, then choose the Refresh action and click the Submit button. *Don't forget to*

Cache Storage Management

Cache Type	Description	Associated Tags	Status
<input checked="" type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	ENABLED

re-login after both these procedures.

How to Make a Database Backup:

- Before you make any changes, it is recommended that you backup your data first. In Magento, you can use a native backup tool in Admin Panel -> System -> Tools -> Backups.
- Click the Database Backup button - the tool is now copying the data from your store's database to your local database.
- The Magento backup file appears in /var/backup/ after

Backups	System Backup	Database and Media Backup	Database Backup		
Page 1 of 1 pages View 20 per page Total 2 records found	Reset Filter	Search

<input type="checkbox"/>	Apr 24, 2013 4:00:01 AM	4150231	Database	gz (The	Rollback

the procedure.

How to Enable Error and Exception Logging in Magento:

- By default, Magento does not register messages about errors and exceptions; so if something bad happens, you won't even know.
- To turn on the logging, you can navigate to System -> Configuration -> Developer -> Log Settings and set the Enabled option to Yes.
- Don't forget to set full access permissions (777) to the following folder: /var/log, since that is the place where those log files are stored.

Log Settings	
Enabled	<input type="text" value="Yes"/>
System Log File Name	<input type="text" value="system.log"/> <small>▲ Logging from Mage::log(). File is located in {{base_dir}}/var/log</small>
Exceptions Log File Name	<input type="text" value="exception.log"/> <small>▲ Logging from Mage::logException(). File is located in {{base_dir}}/var/log</small>

How to Re-Index Your Data:

- In order to re-index product catalog data, go to System -> Index Management.
- Select all elements, choose the Reindex Data action and click the Submit button. It is not necessary to re-login to

Index Management

Select All Unselect All Select Visible Unselect Visible 2 items selected				Actions	Reindex Data	Submit
