## Introduction

Advanced Geo IP Redirect extension automatically detects visitor's location and redirects him to regionally optimized storefronts for geo-targeting. The regionally optimized store can have region-specific language, currency, and targeted local products. This GEOIP extension for Magento detects location to which a visitor belongs so that they can be directed towards their most likely interesting products and services. Basically, extension tracks customers' location based on their IP addresses and redirects them to a relevant store, changing the store view, language, and currency.

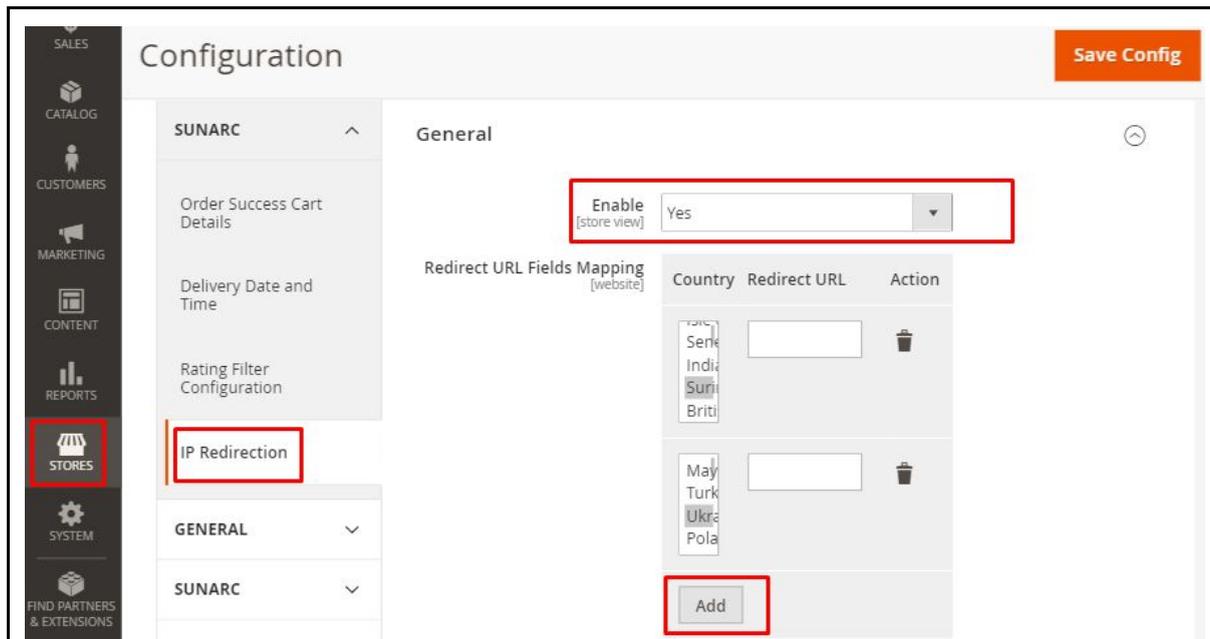

This extension allows you to create multiple redirection rules by creating more than one region. Each region can be assigned to multiple countries and relevant stores to facilitated geo-targeting campaigns. This extension automatically recognizes the users' IP-based location and directs them accordingly. It removes the ambiguity and confusion on the part of users, who find difficulty in browsing products meant for their region.

With the help of this extension when visitors visit the website it automatically changes the language and currency of a store based on the user's location. It helps to ensure that the customers see the most relevant product, price, and language with this geo IP location based redirector module. Admin can create different groups depending upon a combination of various countries. By assigning a language and currency to each group, you can send visitors to a specific storefront according to the country they belong to.

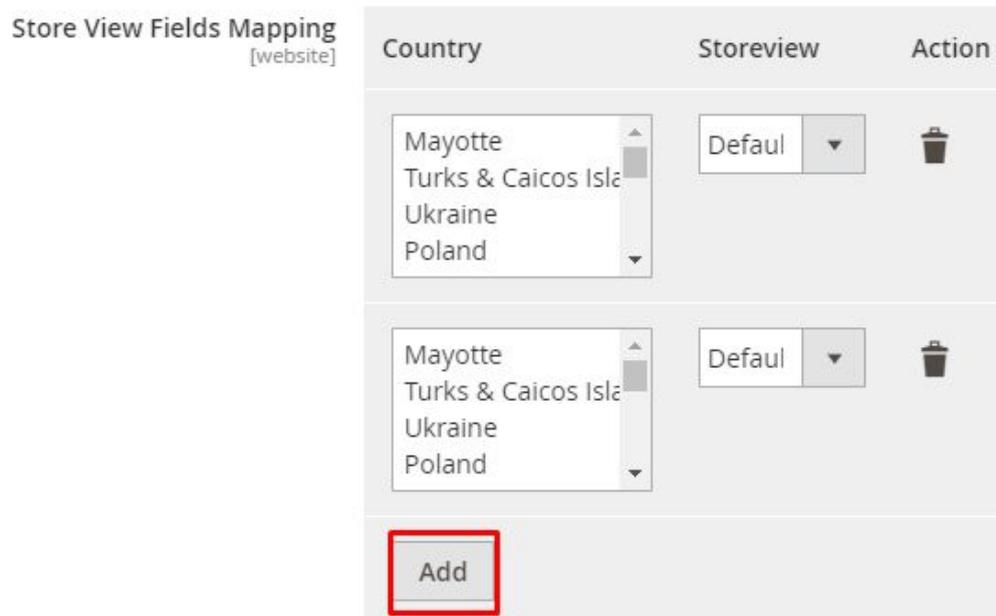

This extension is especially useful for multi-website Magento setups or just for multi-lingual web stores. The extension detects the visitor's geographical location by his IP address and forwards him to the appropriate store, store view, website, or language. Knowing the visitor's geographical position, the extension can also detect the currency that is used in the given country. Based on this information it can switch the catalog price currency.

## Backend Settings of the Extension

- Navigate to **Stores > Settings > Configuration > SunArc > IP Redirection** in Magento Admin Panel.
- **General Configuration** screen opens.
- **Enable:** Choose **Yes** to enable the effect of Geo IP Redirect.
- **Redirect URL Fields Mapping:** Select the required list of visitor country from the drop down to which the original URL has to be redirected. Multiple countries with different Redirect URL can be added.

- **Store View Fields Mapping:** Choose various countries and the stores to which they are to be associated. Multiple store view can be added.

- **Currency Fields Mapping:** Choose various countries and the currencies to which the countries are to be associated.

**Currency Fields Mapping**  
[website]

Country	Currency	Action
<div style="border: 1px solid #ccc; padding: 5px; margin-bottom: 5px;"> Mongolia  Norfolk Island  Angola  Antarctica </div>	<input style="width: 50px; height: 20px;" type="text"/>	<input type="button" value="🗑️"/>
<div style="border: 1px solid #ccc; padding: 5px; margin-bottom: 5px;"> Mayotte  Turks &amp; Caicos Islan  Ukraine  Poland </div>	<input style="width: 50px; height: 20px;" type="text"/>	<input type="button" value="🗑️"/>
<input style="border: 2px solid red; padding: 5px 15px;" type="button" value="Add"/>		

➤ Click on **'Save Config'** to save the configuration settings.

## Features of the Extension

### URL-redirection based on the users' IP address

The list of countries or IP addresses redirection can be mapped to custom URL or store from the back-end. After auto-recognition of the users' location, the Magento 2 Advance GeoIP extension redirects the users to the region-specific website in a particular language. It aids in better comprehending the product, deals, shipping options, policy, and much more regional features.

### Automatically switch currency based on visitor's location

The extension detects the location of your store visitor using GeoIP technology and changes price currency to the one which is actually used in the potential customer's country. Also, your customers don't have to choose the language prior to starting purchasing – it will be done automatically.

### Restrict redirection for particular URLs

In case you want to keep the URLs like home or FAQ page the same for all store views, you can exclude them from redirection. At the same time, you can apply redirect option only to the certain store pages, e.g. Delivery info or Contacts.

### Restrict redirects by IP address

It helps to keep the settings in such a way which allow certain people to see your web site as it is despite their location. For example, when some of your staff works remotely from different countries. You can easily do this by specifying their IPs in the module's settings.
