Introduction

SunNative - This is an online shopping application which allows to walk away from the drudgery of general items shopping and welcome an easy relaxed way of browsing and shopping. This app allows to bring all the products together under one platform. The list of features offered by SunNative are as below -

- ❖ **Building the Plot** - Brilliance is a skill which can be attained through efforts. Keeping the same in mind, SunNative magento application was created. The primary focus here was to make it viable for both, manufacturer and retailer.
- ❖ **Bringing it Together** - The time came to bring all the products at one place. The designers and codejunkies here, gave utmost attention to the arrangement of these.
- ❖ **Best User Experience** - Different sections were integrated into the interface to bring the best user experience for both; manufacturer and retailer. Also we took intense care from the design perspective.
- ❖ **Information Oriented** - SunNative mobile app offers the opportunity to share new product information, discount sales information, coupons and freebies with the customers.
- ❖ **Search Products** - It helps to integrate a massive list of products and so required to add the option to search products. This will help the user to surpass the long list of items and have a look at only those, he is interested in.
- ❖ **Wishlist** - Apart from this, so as to keep the purchase smoother, they added the option to move the products to wishlist. With this they can reconsider anytime they wish, without wasting time to find them again.
- ❖ **Shopping Cart** - The cart keeps all the shortlisted products together, with the respective price and discount availed. It also allows you to add or remove any particular item/quantity before the final payment.
- ❖ **Best Offers** - Showcase the list of products available at its best price and offers.

- ❖ **Provides Added Customer Value** - It increases customer value by speeding up the product selection and order processes, more process security, increased flexibility around the clock, Accessing the right information - Cost Effectively and Increases process transparency.
- ❖ **Payment Methods** - The payment process is what puts the “commerce” in “e-commerce.” There are two kinds of payment systems that is considered in Magento SunNative application.: a payment processor and a payment gateway. The current payment methods used in SunNative are Cash on Delivery and PayTm.

Functionality

SunNative Application

1. **Product** - This function helps to provide details of a product which helps boost its appeal to potential buyers. The customers can get the product image with resize and swatches.
2. **Wishlist** - The **Wish List function** itself serves as a way for your customers to select and track their desired items for purchase at a later date. Here, customer can add, delete product from the wishlist.
3. **Filter** - This function allows you to limit the results to a reduced set that matches the **filter(s)** you select.
4. **Customer Order** - This contains customer’s order and the order details.
5. **CartItem** - This provides item with configurable and bundle option within the cart.
6. **Search Terms** - A search term is what users key into a search engine when they want to find something specific. A search term can be a single keyword or a combination of words. This function helps to learn the purchase pattern of a customer.
