

INTELLIGENT PRODUCT ASSISTANT MODULE FOR MAGENTO

This module uses the yahoo weather api for identifying the weather forecast.

Step 1 : How to enable IPA module in Magento 2

Go to **Magento 2 Admin > Stores > Configuration > Intelligent Product Assistant > IPA Configuration**

Here you can see the module enable/disable option here. You need to add Location APP ID (which can be registered from [Yahoo Developer Network](#)), Weather API URI, Oauth Consumer Key, Oauth Consumer Secret, Location IP URL

Step 2 : How to Add Weather Conditions to the category attribute

Products are loaded in the suggestion window, if they matches the yahoo forecast keyword. In order to work, we need to configure category with seasonal keywords, this needs to be configured in the category section as shown below image. Set of weather keywords from yahoo is available in the seasonal.txt file which is present in the module package.
