

# Enhanced Admin Product Grid Documentation

## Installation Instructions

This module should be fully plug and play. If you're using a custom back-end package/skin, which you're probably not, you should transfer over the layout `tbt_enhancedgrid.xml` and `tbt/enhancedgrid` templates folder to your own back-end package/skin. Make sure you clear your cache. Logging in and logging back out may also be required.

When the module is enabled you will see an asterisk "\*" beside the Catalog -> Manage Products menu option in the back-end.

Error in config after install for Magento 1.5: If you are still seeing the error "Fatal error: Call to a member function `setEntityTypeFilter()`" please go to the releases tab and click on the latest version and use that extension key.

## Uninstallation Instructions

To uninstall/disable: To turn off Enhanced Product Grid modify the `app/etc/modules/TBT_Enhancedgrid.xml` file and set the 'active' value to 'false'. (note: Turning off module output is not the same thing and it will does not disable the module, rather it just disables output so you're left with a blank product management screen )
