

# Installation from Marketplace

## Prepare to install

Installation requires Marketplace module. It's our module that registers Magento packages repository in composer.json file, saves its credentials to the auth.json file, automates a bunch of complex commands required to run prior and after module installation, and provides easy to use module installer.

```
composer require swissup/module-marketplace &&\  
bin/magento setup:upgrade &&\  
bin/magento marketplace:channel:enable magento
```

You'll be asked to enter your credentials. Get your credentials at [marketplace.magento.com](https://marketplace.magento.com)

## Install

When Marketplace module is installed you can proceed with installation in terminal (GUI is also available under *System > Marketplace* menu entry).

```
bin/magento marketplace:package:require swissup/navigationpro &&\  
bin/magento marketplace:package:install swissup/navigationpro
```
