Navigationpro Menu Settings page

Menu Settings

This page is accessible when editing existing menu settings.

General settings

Identifier *

Maximal Depth

Modifiers

CSS Class

Replace Top Menu at
 Leave empty if you don't want to replace Top Menu

Default Dropdown Settings

Default Item Settings

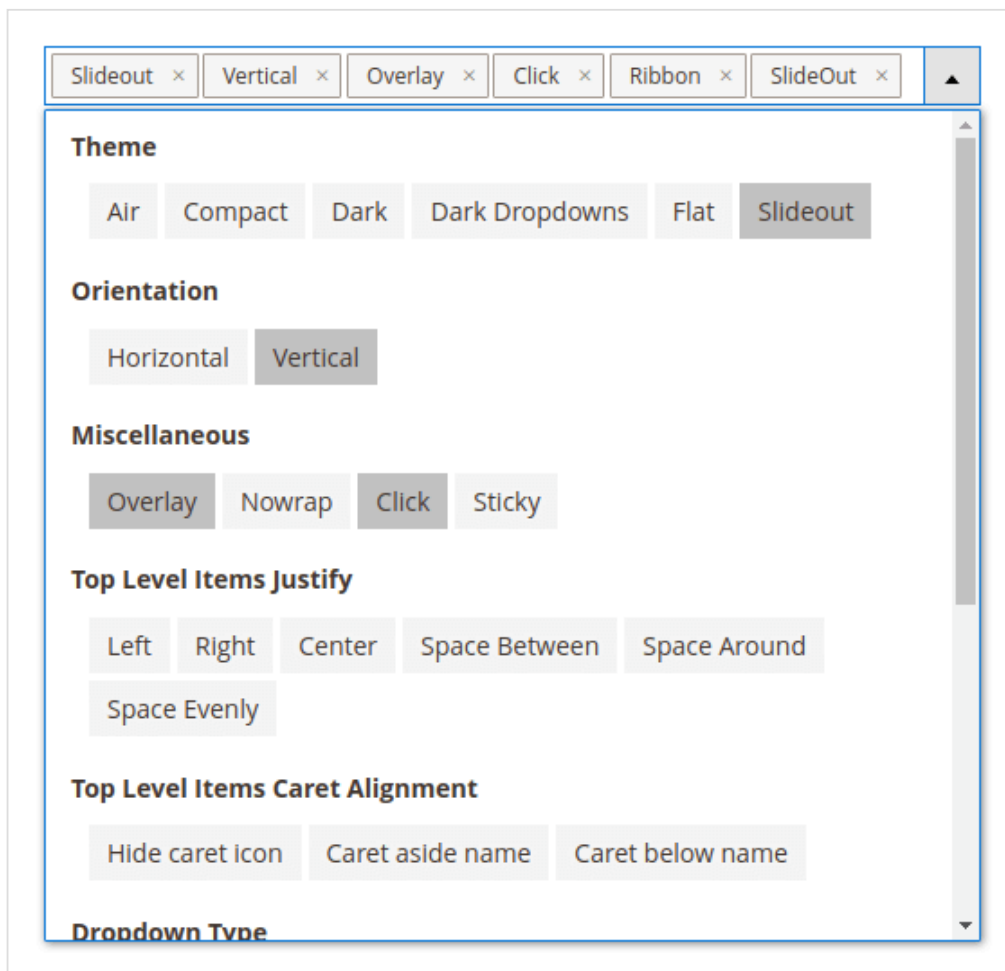

Custom CSS Styles

Option	Description
Identifier	Unique menu identifier.
Maximal Depth	Use this option to limit number of loaded dropdown levels. Use <input type="text" value="0"/> to disable limits.
Modifiers	Set of useful css modifiers to change menu styles and behaviour.
CSS Class	Usefull for menu customization and some kind of menu types .
Replace Top Menu at	Select Store Views where menu should replace standard top navigation
Default Dropdown Settings	Show popup with global dropdown layout settings.

Option	Description
Default Item Settings	Show popup with global item settings.
Custom CSS Styles	Add plain CSS styles when need some extra perfection.

Modifiers

Modifiers - are the set of css classes that could be easily applied to the menu:

Global Dropdown settings

Global dropdown settings ⌵

First level dropdown settings ⌵

Width *

Layout

Link Example

Item-1	Item-2	Item-3	Item-4
Item-1	Item-1	Item-1	Item-1
Item-2	Item-2	Item-2	Item-2
Item-3	Item-3	Item-3	Item-3
Item-5	Item-6	Item-7	Item-8
Item-1	Item-1	Item-1	Item-1
Item-2	Item-2	Item-2	Item-2
Item-3	Item-3	Item-3	Item-3

Add Content

Second level dropdown settings ⌵

There are three fieldsets are available:

- Global dropdown settings.
- First level dropdown settings.
- Second level dropdown settings.

As you may guess, the first one — is for all dropdown levels;
second — for the first dropdown levels only; and the third — for the
second dropdown levels only.

Option	Description
Width	Change dropdown width
Dropdown Position	Change dropdown position . Available for "First level dropdown settings" only

Option	Description
Layout	Change dropdown layout

Global Item settings

Global item settings ⌵

First level item settings ⌵

Second level item settings ⌵

Name as Html Insert Widget... Insert Image... Insert Variable...

```
<a href="{{var item.url}}" class="{{var item.class}}{{depend
remote_entity.thumbnail}} navpro-a-with-thumbnail{{/depend}}">
  <span>{{var item.name}}</span>
  {{depend remote_entity.thumbnail}}
    
  {{/depend}}
</a>
```

If set, html content will be rendered instead of link and name. View ready to use examples at <https://docs.swissuplabs.com/m2/extensions/navigationpro/use-cases/category-name-templates/>

Third level item settings ⌵

There are four fieldsets are available:

Global item settings — for all item levels.

First level item settings — for the first item levels only.

Second level item settings — for the second item levels only.

Third level item settings — for the third item levels only.

Option	Description
Name as Html	Replace regular template with your own . See ready to use examples page .

[Home](#) > [Magento 2.x](#) > [Extensions](#) > [Navigationpro](#) > Navigationpro Widget

Widget

NavigationPro provides its own widget that can be used across the site with the help of *Content > Widgets* page or could be inserted directly into supported content areas (The one with *Insert Widget* button above the textarea).

The screenshot shows a CMS editor interface with three buttons: "Show / Hide Editor", "Insert Widget...", and "Insert Image...". Below the buttons is a text area containing XML code for inserting a widget:

```
<div class="cms-row">
  <div class="cols three">
    <div class="sticky contents">
      {{widget type="Swissup\Navigationpro\Block\Widget\Menu" identifier="features" orientation="vertical"
theme="flat" wrap="0"}}
    </div>
  </div>
  <div class="cols nine features">
    <section>
```

You can also use widget programmatically via layout xml instructions. The options below will help you to find option code to use:

Widget Options

Option Name	Code	Description
Menu	identifier	NavigationPro menu indentifier

Option Name	Code	Description
Show Active Branch Only	show_active_branch	Enable Amazon-like sidebar menu
Initially Shown Levels Count	visible_levels	Menu with initially expanded levels . Could be used separately from Show Active Branch Only option
Theme	theme	Menu theme
Orientation	orientation	Choose between horizontal (Top), vertical (Sidebar), and accordion (Sidebar) menus.
Dropdown Positioning	dropdown_side	Choose between Standard, Left (Useful when menu is added to right column), and Top dropdown sides
Additional CSS Class	css_class	Additional css class for menu
Wrap into Block Template	wrap	Usefull, when placing menu into sidebar
Block Title	block_title	Block wrapper title
Block CSS Class	block_css	Block wrapper class

Layout XML usage

```
content_copy <referenceContainer name="sidebar.main.top">
  <block class="Swissup\Navigationpro\Block\Widget\Menu" name="sidebar.menu"
  template="Swissup_Navigationpro::menu.phtml">
```

```
<arguments>
  <argument name="identifier" xsi:type="string">sidebar</argument>
  <argument name="show_active_branch" xsi:type="boolean">>true</argument>
  <argument name="theme" xsi:type="string">compact</argument>
  <argument name="orientation" xsi:type="string">vertical</argument>
  <argument name="wrap" xsi:type="boolean">>true</argument>
</arguments>
</block>
</referenceContainer>
```

PHP Code

```
content_copy echo $block->getLayout ()
->createBlock('Swissup\Navigationpro\Block\Widget\Menu')
->addData([
    'identifier' => 'sidebar',
    'show_active_branch' => true,
    'theme' => 'compact',
    'orientation' => 'vertical',
    'wrap' => true,
])
->toHtml ();
```

[Home](#) > [Magento 2.x](#) > [Extensions](#) > [Navigationpro](#) > [Use cases](#) > Navigationpro Simple Menu

Simple Menu

Simple menu doesn't require any additional settings, so in this tutorial we will create basic menu from a scratch.

Navigate to *Swissup* > *NavigationPro* page and press **Add New Menu** button.

NavigationPro 🔍 🔔 👤 admin ▾

[Add New Menu](#)

Filters 👁 Default View ▾ ⚙ Columns ▾

Active filters: Identifier: argento [Clear all](#)

Actions ▾ 6 records found 20 ▾ per page < 1 of 1 >

<input type="checkbox"/>	ID ↑	Identifier	Replace Top Menu at	Status	Action
<input type="checkbox"/>	136	argento_stripes_topmenu	Argento Stripes	Enabled	Select ▾
<input type="checkbox"/>	134	argento_essence_topmenu	ArgentoEssence, All Store Views	Enabled	Select ▾
<input type="checkbox"/>	132	argento_mall_topmenu	ArgentoMall	Enabled	Select ▾
<input type="checkbox"/>	131	argento_pure2_topmenu	ArgentoPure2	Enabled	Select ▾
<input type="checkbox"/>	111	argento_luxury_topmenu	ArgentoLuxury RTL	Enabled	Select ▾
<input type="checkbox"/>	109	argento_flat_topmenu	ArgentoFlat	Enabled	Select ▾

Fill the form and press **Save**

New Menu 🔍 🔔 👤 admin ▾

[← Back](#) [Save](#)

Name *

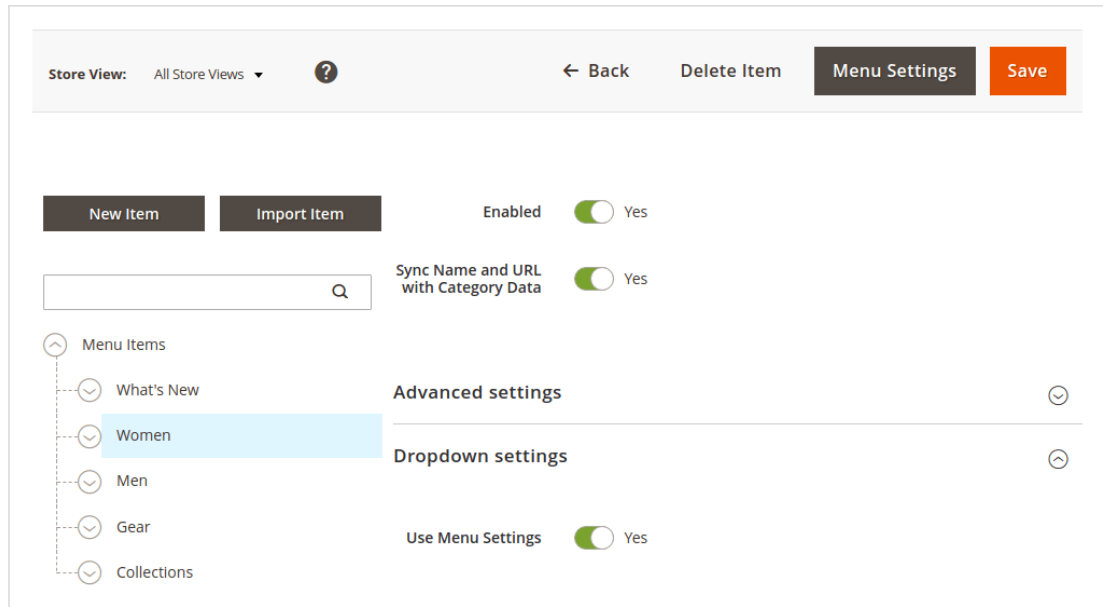

Type * ▾

Import Categories From * ▾

Replace Top Menu at ▾

Leave empty if you don't want to replace Top Menu

That's all. Now you can select item in the tree and edit it preferences and dropdown settings:

Feel free to move items in the tree to get desired menu structure. The changes **will not** affect real categories tree.

See the following use cases that will help you to upgrade simple menu:

[Stacked Dropdowns](#)

[Iconic Menu](#)

[EasyCatalogImages Menu](#)

[Complex Dropdown Contents](#)

[Home](#) > [Magento 2.x](#) > [Extensions](#) > [Navigationpro](#) > [Use cases](#) > Navigationpro Megamenu

Megamenu

Steps to create Menu

Navigate to *Swissup* > *NavigationPro* page, and press “Add New Menu”.

Fill the with following values:

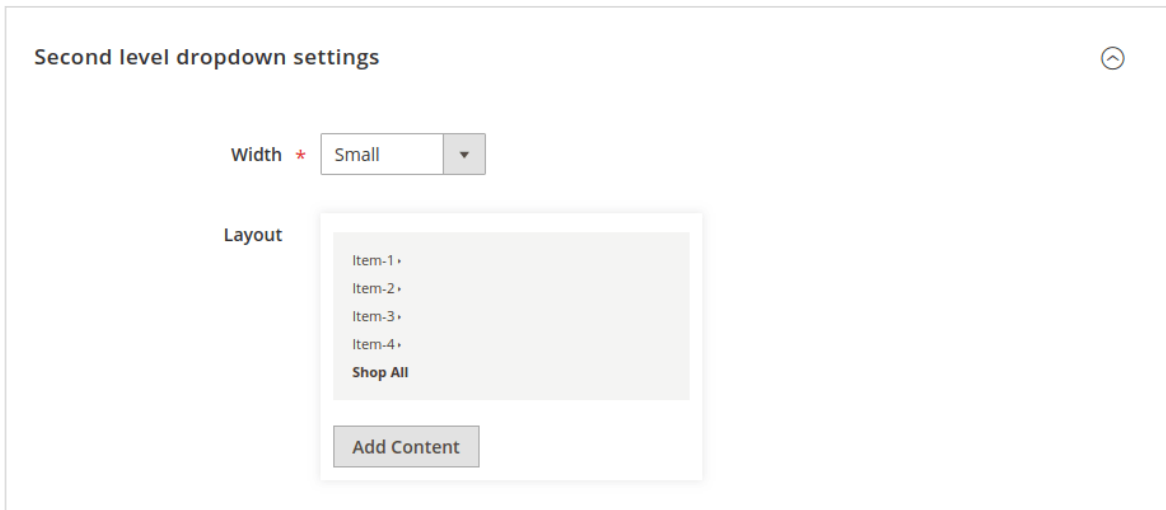

```
content_copy Name: Some name that will explicitly describe the
menu
Type: Megamenu
Import Categories From: Select Root Category
Replace Top Menu at: Select Stores that will use this menu
```

Save the form. Now you can open your store frontend and check if everything works fine.

Tips and Tricks

“Shop All” Link

If you would like to limit the number of categories to display on the second dropdown level (Show ‘Shop All’ link), navigate to *Menu Settings > Open Dropdown Settings > Second level dropdown settings* and edit “Layout” settings:

Second level dropdown settings

Width * Small

Layout

- Item-1
- Item-2
- Item-3
- Item-4
- Shop All

Add Content

Category Image in Dropdown

We use [EasyCatalogImages](#) to add thumbnail attribute to each category. You can replace it with any other attribute. Open menu in backend, then navigate to *Menu Settings > Open Dropdown Settings > First level dropdown settings*. Here you can edit template that shows category image:

```

content_copy <div style="overflow: hidden; max-height: 350px;"
  {{depend remote_entity.thumbnail}}
    
  {{/depend}}
</div>

```

Per-item Dropdown Settings

Sometimes you may want to change dropdown layout for particular item only. Open menu in backend, click on the category to edit in categories tree on the left and turn off “Use Menu Settings” in dropdown settings on the right. Here is a screenshot of dropdown settings for “Women” category:

Dropdown settings ⌵

Use Menu Settings No

Width * ▼

Layout Women

Tops	Accessories	Jewelry	Bottoms
Hoodies	Bags & Lug...	Bracelets	Pants
Jackets	Books & M...	Charms	Shorts
Tees	Eyewear	Necklaces	Denim
Bras & Tanks	Shoes	Watches	Tights
Blouses	Jewelry	Earrings	Formal Pants
