Review Reminder

General ⌵

Enable reCAPTCHA for frontend [store view] Yes ▾
Replace default CAPTCHA on frontend with reCAPTCHA from Google.

Enable reCAPTCHA for admin login [store view] Yes ▾
Replace default CAPTCHA on backend login page with reCAPTCHA from Google.

API key ⌵

Site Key [store view] 6LflMTUUA AAAAF7NfK2CDV_PtyTn3EXXB/

Secret Key [store view] *****
Key for communication between your site and Google. Be sure to keep it a secret.

Design ⌵

ReCAPTCHA type [store view] reCAPTCHA v2 ▾
You can read more about types of reCAPTCHA at developers.google.com/recaptcha.

Color theme [store view] Light ▾

Size of generated captcha [store view] Normal ▾

In section API keys you have to insert Site Key and Secret Key. Google creates these keys for your domain. If you do not specify keys, then you get a message instead of captcha:

Add your keys for reCAPTCHA

If you still do not have keys, please visit <https://www.google.com/recaptcha/admin> to generate them. Set them into respective fields of reCAPTCHA extension config.

Take a notice, if you generate keys for Invisible reCAPTCHA then you can use them to show reCAPTCHA v2 also. But you can not use keys for reCAPTCHA v2 to show Invisible reCAPTCHA.

In section `General` you can disable or enable reCAPTCHA. As you can see, you may enable recaptcha only for store frontend or only for magento backend.

In section `Design` you can select type of reCAPTCHA and choose its color or size. Size is available for reCAPTCHA v2 only.
