

# Tapita Installation Guide

1. Go to Tapita extension on Magento Marketplace and Add to cart > Checkout.
2. From the root of your Magento directory, run the commands:

```
composer require tapita/module-tapitapb:3.0.2
bin/magento setup:upgrade
bin/magento setup:di:compile
bin/magento setup:static-content:deploy
bin/magento cache:flush
```

3. Then, go to [Tapita.io](https://tapita.io) to register a free account
4. Log in to your Tapita account. A popup will appear to guide you through the setup process. Select in this order: **Magento > No, I don't use any headless frontend > Start using Tapita**

5. Then, go to **Integration** tab and copy the **Integration Token** to prepare for the next step
6. In your Magento backend, go to **Stores > Configuration > Tapita PageBuilder Frontend** to enable the extension and configure the fields:

## Tapita Builder

**Enable**  
[global] Yes

**Override your URL**  
[global] No

**Tapita Integration Token**  
[global]

Go to <https://tapita.io/pagebuilder/> to create one. Click save to fetch latest Data.

**Tapitak Hook Token**  
[global]

Token is used by hook url below. Use it to sync with tapita whenever you want.

**Sync and Hook**  
[global] **Sync**

Hook URL: [https://solution1641483497.pwa-commerce.com/tpbuilder/hook/index/hook\\_token/](https://solution1641483497.pwa-commerce.com/tpbuilder/hook/index/hook_token/)

## Footer Block

**Enable**  
[store view] Yes

Enable Footer Block would use the block configured below instead of original footer items.

**Select Block**  
[store view] Footer Links Block

- a. **Enable:** Yes
- b. **Override your URL:** decides what will happen if there are pages on Magento backend and Tapita builder with the same URL path
  - i. **Yes:** Tapita page will be used
  - ii. **No:** Magento CMS page will be used
- c. **Tapita Integration Token:** paste the **Integration Token** that you've copied from Tapita dashboard in Step 4. After that, click **Save Config** before you continue the other configuration steps.
- d. **Tapita Hook Token:** ignore this field
- e. **Sync and Hook:** the content for this field will appear after you have entered your Tapita Integration Token and Save Config.
  - i. **Sync button:** you can click this button when you want to actively pull all the Tapita pages to Magento. Otherwise Tapita pages will be synced with Magento every time you click Publish on Tapita.
- f. **Footer Block:**
  - i. **Enable:** select Yes if you want to use your desired Magento CMS Block to replace the current Magento website footer.

- ii. **Select Block:** the CMS Block to choose as the footer
  - g. **Default Plain Page:** ignore this field
- 7. Then, you can start building your pages in your Tapita dashboard. When you publish a page, it will be synced to your Magento site.
