## Installation/Upgrade Instructions

### STEP 1 - Install Magento extension

After you get the free version from the [Magento Marketplace](#), use the following command to install the extension:

#### Composer command

```
composer require tnw/quickbooks=2.1.17
```

#### Installation Errors?

If you are seeing errors installing this via composer. See [Cannot update or install the extension via composer](#) for an alternate way to install the extension.

### STEP 2 - Compile & clear cache

1. Open command prompt (CLI)
2. Navigate to Magento 2 root directory and run the following commands:
  - a. Upgrade Magento extension(s)

#### \*nix command

```
bin/magento setup:upgrade
```

b. Re-compile Magento files:

**\*nix command**

```
bin/magento setup:di:compile
```

c. Re-deploy static content

**\*nix command**

```
bin/magento setup:static-content:deploy
```

d. Clear Magento cache

i. Details can be found on [Manage the cache](#) Magento DevDocs

e. Rebuild Magento indexes:

**\*nix command**

```
bin/magento indexer:reindex
```

3. NOTE: For more details about installing custom modules check <http://devdocs.magento.com/guides/v2.0/>

4. If you face any issues, try running following command:

**\*nix command**

```
rm -rf var/generation/*
```

When go though the all steps again

## STEP 4 - Configuration

- Configuration: Connecting to QuickBooks
  - Switch from Sandbox to Production
- Configuration: Customer Synchronization
