Google Maps Store Locator

Functionality Manual

A must-have extension for Magento 2 store owners who have online stores, as well as physical stores. Our Store Locator extension helps customers to find the precise store location on a Google map where they can buy what they are looking for. Customers can search using the store name, country, postcode, city name, or other store information. Also they can search nearby store using postcode. This will be really helpful to your customers who prefer buying offline and it will increase your sales.

This extension allows admin to add or update addresses of physical retail stores to your website just in a few clicks. All stores will display on one map and details listed on the left sidebar. When a customer clicks on store, map will display that store.

API & Pricing:

The extension requires an API key to access Google Map. You can get the keys from below URL:

https://developers.google.com/maps/documentation/javascript/get-api-key

You can get Pricing details from below URL:
