1. Canonical URL Configuration

Once you are finished with installing the extension it is time to proceed to your Magento 2 backend to finalize the Canonical URL setup.

Before start using the extension, we suggest running through the Canonical URL extension settings and other options available to adjust the settings. This will help in better understanding of how the extension functions and what can you expect your canonical URL to look and feel like.

1.1. Accessing the Extension Main Settings

The screenshot displays the Ulmod admin interface. On the left is a dark sidebar with a navigation menu. The 'STORES' section is highlighted, containing 'Settings', 'All Stores', 'Configuration', 'Terms and Conditions', 'Order Status', 'Taxes', 'Tax Rules', 'Tax Zones and Rates', 'Currency', 'Currency Rates', and 'Currency Symbols'. The 'Configuration' option is selected, opening a sub-menu with 'Attributes', 'Product', 'Attribute Set', and 'Rating'. The 'Attribute Set' option is selected, leading to a page with a search bar, a notification bell, a user profile 'admin', and a 'Reload Data' button. Below this is a message: 'disabled. To enable the chart, click [here](#).' A table of products is visible at the bottom, with columns for 'Price' and 'Quantity'. A black callout box is overlaid on the page, containing the following text:

To access the configuration settings for this extension, go to **Stores > Configuration > Ulmod Extensions > SEO Canonical Url.**

	Price	Quantity
Track Tote	\$32.00	4
messenger Bag	\$45.00	4
shoulder Tote	\$24.00	2
Fitness IV	\$14.00	1
Weather Tank-L-Gray	\$22.00	1

1.2. Canonical URLs Settings

*Please, disable the default Magento 2 canonical under the **Configuration -> Catalog -> Catalog -> Search Engine Optimization** section before enable the extension.*

General

Enable

Yes

[S]

If 'Yes', the canonical meta tag will be added in meta header for any targeted page.

Add canonical meta tag to the layered navigation?

No

[S]

Add canonical meta tag to the current category, filtered category or disable this functionality

Enable – set 'Yes' to add canonical meta tag in meta header for any targeted page or 'No' to disable.

Choose to **add canonical meta tag to the layered navigation** pages for filtered page or current category

1.2. Canonical URLs Settings

Trailing slash for canonical meta tag

Crop

Trailing slash will be added or cropped to the pages without suffix .html or .htm

Exclude canonical meta tag on these pages

catalog_product_view
cms_page_view
cms_index_index

Please specify the pages to exclude or ignore canonical meta tag. One page per line

Example:

To exclude canonical meta tag on product pages use :
'catalog_product_view'

Add rel="next" and rel="prev" to the category page

No

The rel=next/prev tag inform Google, where exactly the 1st and the last pages are, and what page is a next or a previous one.

'Crop' or 'Add' trailing slash to the canonical URL of any pages. One page per line

Add the pages to exclude or remove the canonical meta tag.

Example:

To exclude canonical meta tag on product pages use : **catalog_product_view**

To exclude canonical meta tag on CMS Pages (All) page use : **cms_page_view**

To exclude canonical meta tag on CMS home page use : **cms_index_index**

To exclude canonical meta tag on category pages use: **catalog_category_view**

Use the **rel=next/prev** tag to inform Google, about the 1st and the last pages, next or previous page.

1.3. Canonical URL Per Product Attribute

Set the Canonical URL per product attribute, for pages filtered by layered navigation.

In the **Canonical Tag for Pages Filtered by Layered Navigation Leads to** field, choose from **Use Config**, **Filtered page** or **Current Category** option per attribute.

The **Use Config** option is the setting available on the “**Add canonical meta tag to the layered navigation ?**” field , under the *Stores > Configuration > Ulmod Extensions > SEO Canonical Url -> General settings*
