

How to install the vianetz Magento Extension?

Please find as follows a short overview how to easily install our Magento extensions within minutes.

Preparations / Requirements:

1. Do a backup of your Magento installation for safety reasons (database and files).
2. Disable Magento compilation feature (if activated): *System Tools Compiler*
3. Uninstall probably existing previous versions of the extension

Installation

1. Unzip the setup package and copy the contents of the *src/* folder into the Magento root folder. (The folder structure is the same as in your Magento installation (e.g. *app/*, *skin/*, ..). No files will be overwritten.)

Please assure that the files are uploaded with the same file user permissions as the Magento installation!

2. Clear the Magento cache (z.B. *System Cache Management*) and related caches if available (e.g. APC, Varnish, ..).
3. Logout from the admin panel and then login again.

Congratulations, the installation has been successfully completed!
