

Extension for *Magento 2*

Advanced Invoice Layout

User Guide

Version 1.0

The *Advanced Invoice Layout* module for the *Magento* online shop software offers a customizable layout for invoices, creditmemos and shipments.

More details about the functionality of this module can be found on the product page at www.vianetz.com/advancedinvoicelayout.

Take also a look to our **demo shop** to see the extension in action at magento2.vianetz.com.

Following you will find some information about the module. The screenshots are taken from the current *Magento* version 2.1.6.

More information, for example additional documentation for the *Magento* online shop is available on our website vianetz.com.

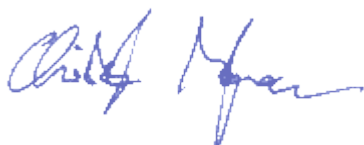

If you have any questions, problems or comments to our software please feel free to contact us via info@vianetz.com.

Furthermore we want to point to the fact that there can be no warranty that the information in this package and the related documents are complete, correct and current in either case.

A consultancy of a legal expert is required in either case.

Your feedback about this module will be received under vianetz.com/en/contacts/. This is necessary for a continuous improvement of this kind of software.

Best regards from Munich,

Dipl.-Ing. Christoph Maßmann

1. Print PDF documents in Magento Admin Panel

The Advanced Invoice Layout Extension for Magento offers customizable layouts for the PDF documents of the default Magento invoices, shipments and creditmemos.

After the installation of the extension via the Magento standard installation process you can instantly generate the PDF documents.

Therefore in Magento Admin Panel please go to *Sales > Invoices* and select an invoice that you want to print. On the invoice detail page on the upper right you will find a button „Print PDF invoice“ that will generate the PDF document via the Advanced Invoice Layout Extension.

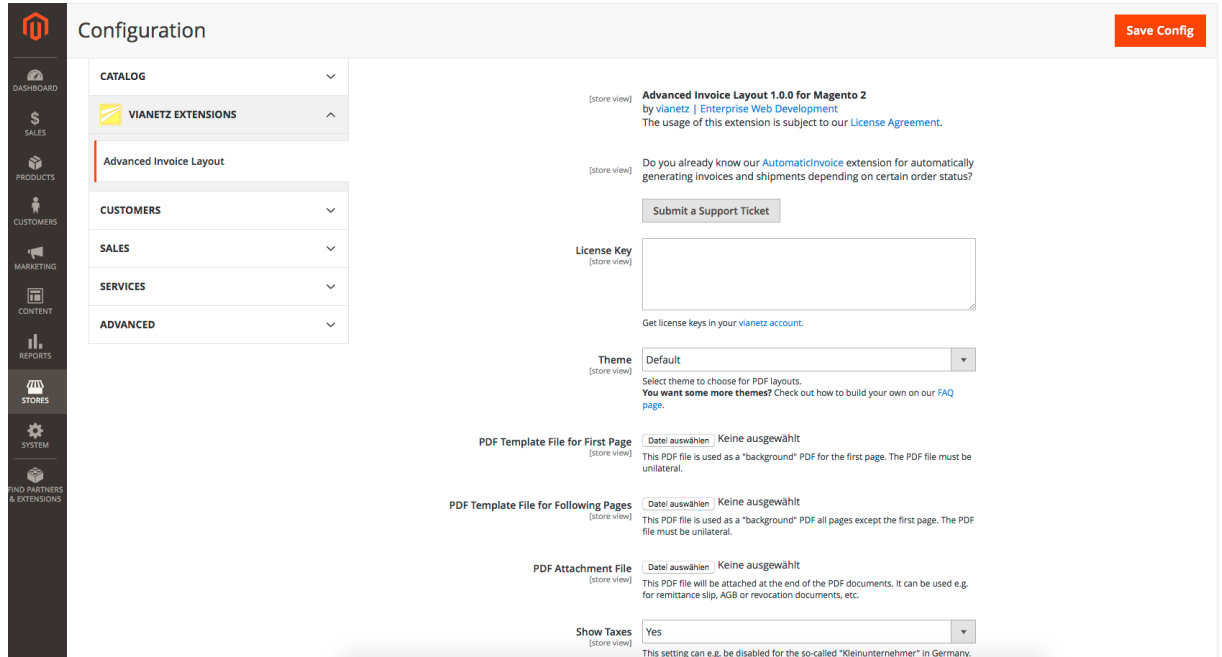

Exactly the same applies to shipments and creditmemos as well, i.e. the menus are *Sales > Shipments* or *Sales > Creditmemos*.

2. Configuration of the PDF document layout

After installation the configuration section of the Advanced Invoice Layout Extension for Magento can be found in the Magento Admin Panel under *Stores > Configuration > Advanced Invoice Layout*.

Each document type (invoice, shipment and creditmemo) has a separate configuration group as well as several other general configuration groups.

Each setting has an inline help text that optionally links to a more detailed help page on our website.

The screenshot shows the 'Configuration' page in a Magento admin interface. The left sidebar contains navigation menus for CATALOG, VIANETZ EXTENSIONS, CUSTOMERS, SALES, SERVICES, and ADVANCED. The main content area is titled 'Advanced Invoice Layout' and includes a 'Save Config' button in the top right corner. The configuration settings are as follows:

- Advanced Invoice Layout 1.0.0 for Magento 2** (store view): by vianetz | Enterprise Web Development. The usage of this extension is subject to our License Agreement.
- Do you already know our AutomaticInvoice extension** (store view): Do you already know our AutomaticInvoice extension for automatically generating invoices and shipments depending on certain order status? Includes a 'Submit a Support Ticket' button.
- License Key** (store view): A text input field for the license key. Below it, a link says 'Get license keys in your vianetz account.'
- Theme** (store view): A dropdown menu set to 'Default'. Below it, a link says 'Select themes to choose for PDF layouts. You want some more themes? Check out how to build your own on our FAQ page.'
- PDF Template File for First Page** (store view): Radio buttons for 'Datei auswählen' (selected) and 'Keine ausgewählt'. Description: 'This PDF file is used as a "background" PDF for the first page. The PDF file must be unilateral.'
- PDF Template File for Following Pages** (store view): Radio buttons for 'Datei auswählen' (selected) and 'Keine ausgewählt'. Description: 'This PDF file is used as a "background" PDF all pages except the first page. The PDF file must be unilateral.'
- PDF Attachment File** (store view): Radio buttons for 'Datei auswählen' (selected) and 'Keine ausgewählt'. Description: 'This PDF file will be attached at the end of the PDF documents. It can be used e.g. for remittance slip, AGB or revocation documents, etc.'
- Show Taxes** (store view): A dropdown menu set to 'Yes'. Description: 'This setting can e.g. be disabled for the so-called "Kleinunternehmer" in Germany.'

There are 2 additional (optional) default configuration sections that are taken into account by the Advanced Invoice Layout that can be found in the following places:

- Stores > Configuration > Sales > Sales > Invoice and Packing Slip Design > Logo for PDF Print-outs
- Stores > Configuration > Customers > Customer Configuration > Address Templates > Advanced Invoice Layout Address Template
