VURBIS

# User Manual – Vurbis Punchout Plugin™ for Magento 2

Welcome! The Vurbis PunchOut Plugin™ is a Magento 2 Standard Extension. Make sure you have obtained your license key from Vurbis, and have installed the extension using the Installation Guide we have provided.

If you did not receive your license key, please contact support@vurbis.com to obtain it (please include "Punchout Plugin for Magento 2 API License Key" in the subject line.) The API License Key is required to identify you as a company and to configure the extension and unlock the full features of the extension.

Our team will collaborate to provide one-on-one support for the implementation of the Vurbis for Magento 2 solutions as it involves two sides, the extension and the Vurbis Cloud.

Configuration

Time to configure the extension on the eCommerce side. You can either ask the customer to do this, or ask for credentials and input the information yourself. Lets assume you will input the information yourself, login to the Magento 2 backend and navigate to **Stores > Configuration**.

VURBIS

Next find the **Vurbis Interactive** submenu item and open it.

For the API URL, use <u>https://ioedeveloper.com/api</u> when working on staging, for live it would be <u>https://vurbismarketplace.com/api</u>.

Support

If you run into any problems, please contact <u>support@vurbis.com</u>. Please include "Punchout Plugin for Magento 2 Installation Problem" in the subject line and provide a screenshot or error_log from your Magento environment.

Website

Please visit our website <u>www.vurbis.com</u> for the FAQs and other information about cXML and OCI Punchout, and the benefits of making your Magento Store Punchout-ready.
