

# Command-line Bulk Product Importer

for

Magento2

## Description:

Command-line Bulk Product Importer allows you to import products, using Magento2 SSH commands. You can schedule cron jobs to import unlimited products into your store.

### Large size product's csv upload

When the store owner wants to change their websites into new ones, they have to manually add a lot of products on the new sites again. You can't upload large size products CSV/XML file using Magento 2 and, this process can take a lot of time and human resource to do. To overcome this drawback of default Magento 2, this extension for Magento 2 is developed to help import large size Products file using the Magento2.

### Easily import product images.

This extension directly fetches the images from provided folder URL so it is a very easy, convenient, and time-saving process

### Import and Status History

You can also see the import history of your scheduled cron jobs with current status under the Magento import history in the admin. Also, you can upload all type of products (simple, configurable, etc...) with multiple

### images and videos.

This extension will allow you to update product data which was already added.
