

SMS Notification

SMS Notification

for

Magento2

Description:

SMS is always the better option over Email to notify someone due to its higher response rate and read rate. These facts also apply to Magento 2 store admins who want to notify their customers about their Magento 2 store and order activities. Do you want to interact quickly and directly with your customers through SMS?

Thanks to this, it helps to send and receive short notification messages. SMS Notification is a comprehensive and powerful module that enables you to send SMSs to your customers or administrators during various events in your Magento store.

This extension sends SMS automatically to customers for different order events of Magento 2. These events include order confirmation, invoice creation, order shipment, credit memo creation, and order cancellation.

The admin can even customize SMS text for every order event. The extension also allows the admin to send SMS in different languages based on the store views.

Account & Pricing

The extension uses third party SMS API to send SMS to the customers. You need to purchase the API separately. The extension price does not cover any kind of API expenses in it. the admin needs to create an account for whichever gateway he prefers to use and has to buy credits to send SMS

notifications. We have almost covered all global SMS Gateways in this extension. Here is the list of most popular SMS gateway providers with their Sign Up pricing plan.

SMS Gateways and Pricing Plans:

- Twilio
- Msg91
- Bulksms
- Textlocal
- Plivo
- Nexmo
- Signalwire
- Messagebird
- Thetexting
- Clickatell
- Textmagic
- Clicksend
- Callfire

Third-party Service Integration

You can select any API that is suitable for you. If the SMS is not sent after you configure your API, we will do free customization and configuration in the extension for your selected API.

How Does The Extension Work?

Configure the extension and select the SMS type you are about to send for the notifications. Configure the SMS gateway API settings by adding sender ID, API key, API URL and other required details received during the registration with the preferred SMS gateway.

Enable the SMS notifications with your custom SMS text for order placement notifications, order invoice notifications, order cancellation notifications, order shipment notifications, credit memo notifications for the customers. Once the above notifications are enabled and the extension is configured, whenever customers perform specific store and order activities, SMSs are sent to the customers. You can use a predefined SMS variable to put an order or customer-related information in your custom SMS.

Features:

- Free to use
