

# Affiliate System V4.0.0

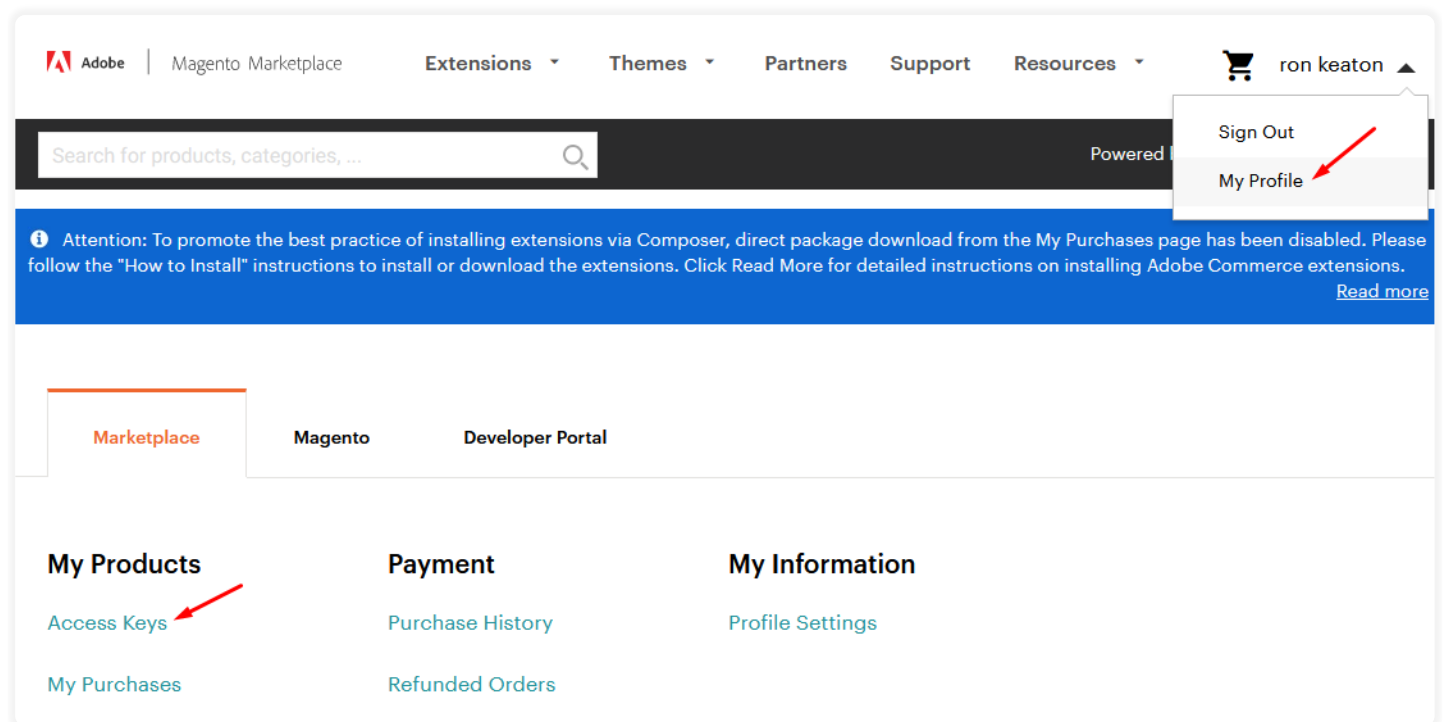

---

## Install Extension From Magento Marketplace

If you have purchased this extension from the Magento Marketplace then please follow the below process or visit [this](#) link.

### #1 Get Access Keys

You need to get access keys, navigate to **My Profile** in Magento Marketplace, then choose **Access Keys** in the **My Products** section.

Go to **Magento 2** and then you need to copy both the Access Keys – Public Key and Private Key. These access keys will be needed in the next steps for authentication.

**Magento 2** **Magento 1**

**Create A New Access Key** These keys can be used for authorized downloads of the Magento 2 platform, extensions, and themes. Please see the instruction document for installing <http://devdocs.magento.com/guides/v2.0/install-gde/install-resource-diagram.html> or extension

Name	Access Keys	Status	Actions
mystore	Public Key: 620000000c1b3d9c38bb58024f10380 Copy Private Key: 302e15000c00ff2227c5f6547f1fd6d Copy	Enabled	Disable Delete

If access keys are not create earlier, click **Create A New Access Key**, enter any name and click OK.

**Create new access keys**

Cancel OK

**Magento 2** **Magento 1**

**Create A New Access Key** These keys can be used for authorized downloads of the Magento 2 platform, extensions, and themes. Please see the instruction document for installing <http://devdocs.magento.com/guides/v2.0/install-gde/install-resource-diagram.html> or extension

Name	Access Keys	Status	Actions
------	-------------	--------	---------

## #2 Update Composer.Json File

To know the component name and version number, go to your Magento Marketplace account section, **My Profile>My Purchases**, then find this extension to view the details. **Please note – Below is an example image, every extension will have its unique component name and version.**

To install an extension or download the extension code for review, you need to use Composer. See "How to Install" section below for instructions. To learn more about Composer, click here: <https://getcomposer.org>.

All Platforms ▼

All Editions ▼

Magento 2

Open Source (CE)

Multi Vendor  
Marketplace

Component name:

webkul/module-marketplace

Versions available

v4.0.0 ▼

#### How to Install:

1. Please ensure you are using correct access keys  
([My Profile - Access Keys](#))
2. Paste the access keys in your auth.json file inside your project
3. Use the "composer require <module\_name>:<version>" command to add the extension to your project. If you just need the extension package code for a specific version (for example, for code review purposes), you can initialize an empty project and just add composer require statement for the extension to a blank composer.json
4. You can see the list of versions in the selector below the extension module name

For detailed instructions, see [DevDocs](#)

After that, navigate to your Magento project directory and update your composer.json file in the following format.

```
composer require <component-name>:<version>
```

For example, to install version 4.0.0 of this extension you need to run the following command:

```
composer require webkul/affiliate-system:4.0.0
```

## #3 Enter Access Keys

Now you will need to enter the [Access Keys](#) that you obtained as explained in the first step #1 Get Access Keys. Wait for Composer to finish updating your project dependencies and make sure there aren't any errors.

## #4 Run Command

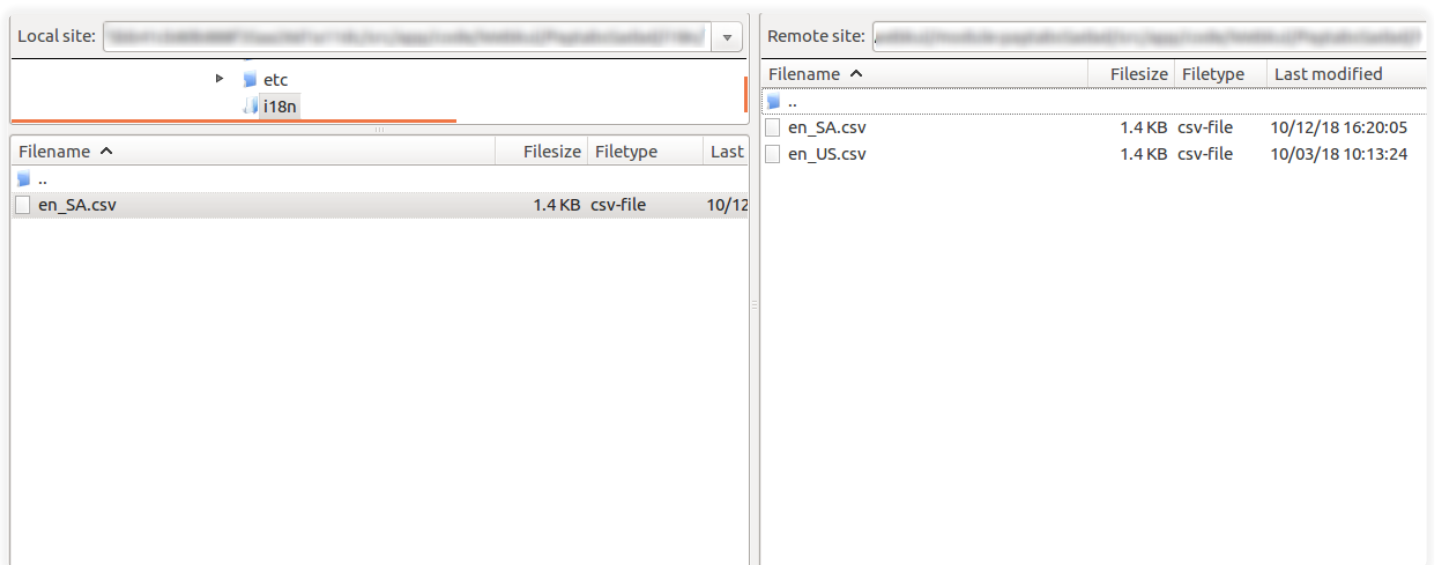

You need to run the following commands:

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
php bin/magento indexer:reindex
php bin/magento cache:flush
```

## Language Translation

For translating the module language, navigate through `src/app/code/Webkul/AffiliateSystem/i18n` and edit the `en_US.csv` file. Thereafter, rename the CSV as “`en_SA.csv`” and translate all right side content after the comma in the Arabic language. After editing the CSV, save it.

Then upload it to the path `src/app/code/Webkul/AffiliateSystem/i18n` where the Magento2 is installed on the server. The module gets translated into the Arabic Language. It supports both **RTL** and **LTR** languages.

The user can edit the CSV like the image below.

```
1 Payment amount is not available,Payment amount is not available
2 Payment method is not set by user,Payment method is not set by user
3 Affiliate User,Affiliate User
