Aramex Shipping

Aramex Shipping is one of the best shipping providers in the world. It is fast, reliable and trusted by millions of customers around the globe.

By installing this add-on, the admin will be able to provide Aramex Shipping method to the customers for shipping the goods.

FEATURES OF ARAMEX SHIPPING

- It will allow the admin to enable or disable Aramex Shipping method.
- The admin will be allowed to set the Aramex shipping method name that will be shown on the front side.
- The admin can add COD rates with this shipping method.
- The code is fully open and easy to use.
- Shipping will be calculated by using the Aramex Shipping API’s.
- The admin can generate the Aramex Shipping label.
- The admin can add the methods allowed for shipping.

INSTALLATION OF ARAMEX SHIPPING

Customers will get a zip folder and they have to extract the contents of this zip folder on their system. The extracted folder has an src folder, inside the src folder you have the app folder. You need to transfer this app folder into the root directory on the server as shown below.
After the successful installation, you have to run the command on root directory- 
“php bin/magento setup:upgrade”

![Image of the command being run]

Run this command in the Magento2 root.

Also, run this command into the Root- “php bin/magento setup:static-content:deploy” You can refer the below screenshot.

![Image of the command being run]

Run this command in the Magento2 root.

After running the commands, you have to flush the cache from the admin panel by navigating through -> System -> Cache management as shown below.
CONFIGURATION FOR MULTI-LINGUAL SUPPORT

For the multilingual support, the admin will navigate through Store->Configuration->General ->Locale Options and select the locale as German (the language into which the admin want to translate his store content).
If a user wants to translate their module from English to German then they need to follow the path `app/code/Webkul/Aramex/i18n` in their unzipped Aramex folder and will get a CSV file with name “en_US.csv”. Now they will rename that CSV as “de_DE.csv” and translate all right side content after the comma in the German language. After editing the CSV, save it and then upload it to the path `app/code/Webkul/Aramex/i18n` where they have installed on the server. The module will get translated into the German Language. It supports both RTL and LTR languages.

The user can edit the CSV like the image below.

```
Rename the csv file in which you want to translate the module. After renaming the csv, edit and save the csv and then upload it.
```

```
After uploading the csv, you can see language code csv name on both sides.
```
ADMIN CONFIGURATION OF ARAMEX SHIPPING

After the successful installation of the module, the admin will have to configure the module as per the requirement. The admin can enable or disable the module, the admin will have to fill up all the required information like- Title, account number, Aramex user-name, Pin, etc. As shown in this screenshot.
After configuration, the module is all set to be used by the customers.

**FRONT-END**

After the setup of the Aramex Shipping method, the customer can easily use this shipping method for their purchases. When any buyer adds the product to cart then there will be an option to fill up the zip/postal code and then shipping methods and price will be displayed in cart page like this screenshot.
After clicking on the “Proceed to checkout” customer will be redirected to the checkout page, here the customer will have to select the shipping method for their purchases.
After selecting the Aramex shipping method customer will click next to review the order and on the order review page, the shipping method will be displayed like this and with the cost of shipping.
By clicking on place order the order will be placed

**NOTE:** The shipping rate for Aramex Shipping rates are calculated based on the weight of the product(s) and origin address of the admin.

**ADMIN MANAGEMENT OF ARAMEX SHIPPING**

Now the Admin view the order from “Sales > Order” and the admin can generate invoices for the ordered products, generate shipment for the order of the products. Even the admin can notify the customers by sending them emails, cancel/hold the order and even edit/reorder the product order.
After viewing the order the admin will create the invoice for the order. The invoice will contain all the shipping information and cost of shipping for that particular order.
After creating Invoice, the admin will create the shipping for the order. You can refer to the below screenshot to understand it in a better way.
The admin can print the Aramex Shipping label as shown below in the screenshot.
The admin can also track the shipment as default magento as shown below.
