

Business Directory V3.0.0

The Business Directory module adds a business directory feature to your e-commerce store. The users can add business indexes.

Additionally, they can search and filter the directories using the standard searches like alphabetical search, extended search, and keyword search.

Also, the user can add the directories with various attributes like categories, maps, and locations with search engine friendly URLs.

Thus this module will enhance your eCommerce store with a business directory.

Features Of Business Directory

- Very Suitable for your vertical industry.

- Admin can create subcategories for the business directory's root category.

- Merchant can enable or disable auto-approval of directories.

- The owner can see reports and claims of directories.

- The store owner can enable/disable/delete directories created by users.

- Merchant can add the reasons for reporting a directory.

- The owner can also delete the reason which is already used in the reports.

- The owner can enable/disable/edit/delete reasons.

- The registered user can create directories with multiple attributes like categories, location, website title, etc.

- Enables multiple image upload for each business directory.

The user can easily reach to any directory by multiple search options like alphabetical search, advanced search, extended search, and a general search.

Users can make claim and reports on the directories.

The user can contact the directory owner.

Business Directory Configuration

After the complete installation of the Business Directory module, the owner needs to navigate through **Store -> Settings -> Configuration -> Webkul -> Business Directory** for module configuration.

The screenshot displays the 'Configuration' page for the Business Directory module. The left sidebar contains navigation icons for Dashboard, Business Directory, Sales, Catalog, Customers, Demo Management, Marketing, Content, and Reports. The main content area is titled 'Configuration' and shows 'Store View: Default Config'. A 'Save Config' button is visible. The 'General Settings' section includes the following fields:

- Enable** [global]: Yes
- Automatically Directory Approve** [store view]: No
- Admin Email-id** [store view]: parker@example.com
- Google Map Api Key** [global]:
- Manage Record** [store view]: Yes
If reason assign to report, reason delete or not.

General Setting

Enable: The owner can choose " Yes" to enable the module else " No".

Automatically directory approve: Merchant can enable or disable auto-approval of user-created directories from the admin side. "Yes" for enabling and "No" for disabling the auto-approval.

Admin Email-id: Forthwith store owner will enter the email id used for this module's email transaction including the admin.

Google Map API Key: Next the merchant will provide the API key of the google map. It will allow users to use google maps while creating their directories for the location purpose.

Manage Records: If the admin select " Yes" then the admin can delete the reasons even they are assigned to a report and select "No" then the merchant cannot delete the assigned reasons.

Please Note:

The admin email id is used to send email to the admin when a user creates/claim/report a directory. The vice versa process is done for the approval of the directory from the admin.

Customers have to wait for the admin's approval to get the created business directory if auto-approval of the business directory is not enabled.

Adding Sub-Categories

The owner can create subcategories under the root category of the Business Directory. Moreover, to add subcategories of the root categories navigate through **Products -> Categories -> Business Directory -> Add Subcategory**

Default Category (ID: 2)

Store View: All Store Views

Save

Add Root Category

Add Subcategory

Collapse All | Expand All

- Default Category (1181)
 - What's New (0)

Design

Use Parent Category Settings: Further merchant has to enable it for inheriting the root category display setting or the “Business Directory” theme in the Theme field.

Theme: If the “Use Parent Category Setting” is not enabled then the theme has to set to “Business Directory”.

Layout: Then, select the layout.

Layout Update XML.

In the end, apply Design to Products.

The screenshot shows the Magento Business Directory settings page for a store with ID 3. The page is titled "Business Directory (ID: 3)" and has "Delete" and "Save" buttons in the top right corner. A left sidebar contains navigation icons for Dashboard, Business Directory, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, and System. The main content area is divided into two sections: "Design" and "Schedule Design Update".

Design

- Use Parent Category Settings** [store view]: A toggle switch is turned off, labeled "No".
- Theme** [store view]: A dropdown menu is set to "Business Directory".
- Layout** [store view]: A dropdown menu is set to "1 column".
- Layout Update XML** [store view]: An empty text input field.
- Apply Design to Products** [store view]: A toggle switch is turned off, labeled "No".

Schedule Design Update

- Schedule Update From** [store view]: A date picker set to "04/1/2020".
- To**: A date picker set to "04/25/2020".

At the bottom of the page, there is a copyright notice: "Copyright © 2020 Magento Commerce Inc. All rights reserved." and three links: "Privacy Policy", "Account Activity", and "Report an Issue".

Please Note:

Selecting the “Use Parent Category Setting” or the Theme as “Business Directory” is necessary to view the directory in the proper manner.

If these settings are not made then the directories will appear as normal products on the front view for the users.

Schedule Design Update

Now select the beginning and end date for the schedule design update.

User Directory Management

After all the above Business Directory module configuration and settings, the registered user can add a directory.

Now to add the directory the user will navigate through **Login(The user will first login) -> Add Directory.**

It has various informative columns of user-created directories like :

Id: It displays the system Id for reasons.

Reason: also It shows the name of the Reason.

Status: moreover It presents the approval status of the reason.

Created At: Date and time of the creation of reason are shown in this column.

The users can delete or update the status of the selected reason to “Enable” or “Disable” via “Actions” drop-down.

Use **Directory selection checkboxes** to select specific Reasons on which the admin has to take the action.

Use Mass Selection checkbox to select all Reasons at once.

Reason Editing

The user can click on **“edit”** to edit a reason.

The screenshot shows the 'Business Directory' admin interface. On the left is a dark sidebar with navigation icons for Dashboard, Business Directory, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, and System. The main content area is titled 'Business Directory' and includes a notification bell with '2' and a user profile 'demo'. Below the title is a toolbar with buttons for 'Back', 'Delete', 'Reset', and 'Save Reason'. The 'Reason' section is active, showing 'Reason Info' on the left and 'Add Reason' on the right. The 'Add Reason' form has two fields: 'Reason *' with the text 'High Charges' and 'Status *' with a dropdown menu set to 'Enable'. At the bottom, there is a footer with the Magento logo, copyright text 'Copyright © 2020 Magento Commerce Inc. All rights reserved.', and links for 'Privacy Policy', 'Account Activity', and 'Report an Issue'.

1. The admin can edit the reason text content via **“Reason”**.
2. Further, edit the status of the reason from the **“Status”** dropdown.
3. Also, the user can delete the reason from the **“Delete”** button.
4. And use the **“Reset”** option to reset the settings of a reason.
5. Then the user can save the edited reason via the **“Save Reason”** button.

“Add New Reason” button is used for adding new reasons for reporting any directory. When any user reports a directory then a

reason for reporting is required, this reason is created by the admin via “Add New Reason”.

The screenshot shows the 'Business Directory' section of an admin dashboard. On the left is a vertical sidebar with icons for Dashboard, Business Directory, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, and System. The main content area is titled 'Business Directory' and includes a notification bell with '2' and a user profile 'demo'. Below the title is a form titled 'Add Reason'. The form has two main sections: 'REASON' and 'Reason Info'. The 'Reason Info' section contains two fields: 'Reason *' with the value 'Non Covered Charges' and 'Status *' with a dropdown menu set to 'Enable'. At the top right of the form area are buttons for 'Back', 'Reset', and 'Save Reason'. The footer of the dashboard contains the copyright notice 'Copyright © 2020 Magento Commerce Inc. All rights reserved.' and links for 'Privacy Policy', 'Account Activity', and 'Report an Issue'.

1. **Reasons:** Now the admin will set the reason content.
2. **Status:** Further The admin can enable or disable the created reason.
3. **Save Reason:** After setting the two fields the admin can save the Reason.

Business Directory User End

After all the above configuration settings and directory addition, any user can view the directory under Directory Category.

Any logged in or a guest user can navigate to the directories by clicking on the “Business Directory”.

Magento 2 Business Directory will add directory feature to your Magento 2 store. The users will be able to add the directories, as well as they will be able to search and filter the directories using the standard searches like alphabetical search, extended search, and keyword search.

The standard chunk of Lorem Ipsum used since the 1500s is reproduced below for those interested. Sections 1.10.32 and 1.10.33 from "de Finibus Bonorum et Malorum" by Cicero are also reproduced in their exact original form, accompanied by English vers [Contact Us](#) the

All Words

First, Searching keywords by entries that have **“All Words”**: Use all the words of the given keyword together to search the directory by name.

For example – If the keyword is “Human rights” then take the whole keyword “Human rights” together for searching a directory by name.

Any Words

Second, Searching keywords by entries that have **“Any Words”**: Take all the words of the given keyword independently to search the directory by name.

For example – If the keyword is “Human rights” then “Human” and “rights” both will get independently used for searching a directory by name.

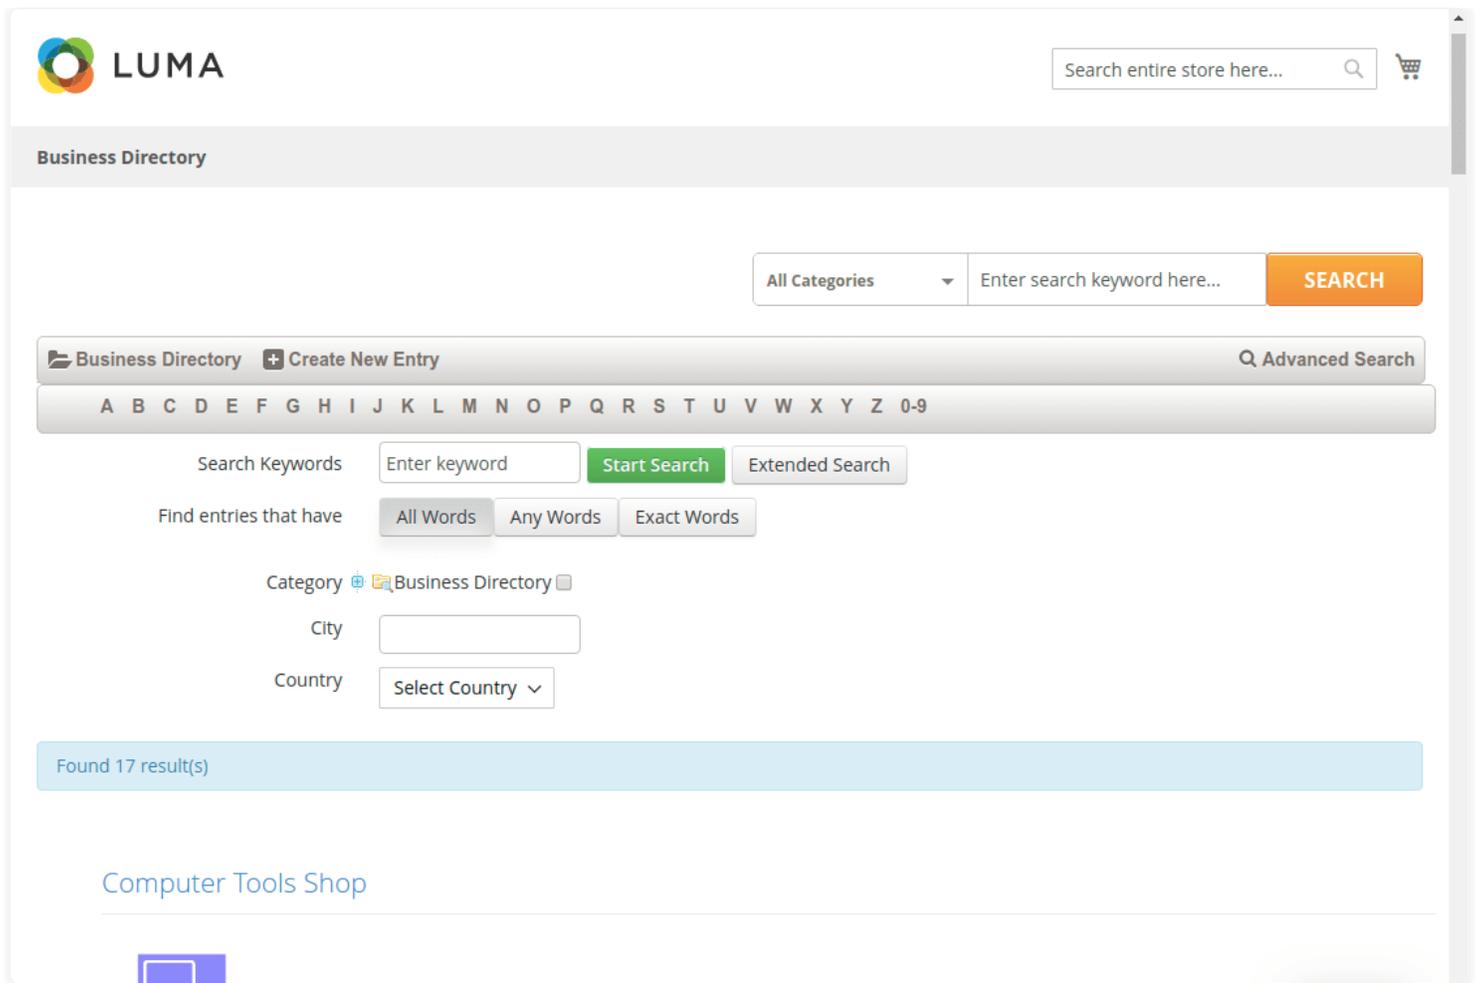

Exact Words

Third, Searching keywords by entries that have “**Exact Words**”: Use all the words of the given keyword and that will exactly get used word by word to search the directory by name.

For example – If the keyword is “Human rights” then the exact word by word keyword will get used for searching.

Extended Search

Use advanced search for better and extended search options including searching by location, category, and country.
