

Custom Order Prefix

webkul.com/blog/magento2-custom-order-prefix/

Published On - October 18, 2016

Custom order prefix is the single best module and super useful when you want to change the prefixes of Order ID, Invoice ID, Shipment ID, Credit Memo ID from the admin end.

Features

- Can add custom prefix for orders.
- Can add custom prefix for shipments.
- Can add custom prefix for invoices.
- Can add custom prefix for credit memos.
- Admin can choose any kind of custom prefix including alphabetical, numeric etc.

Configuration & Working

After the successful installation of the module, the admin will configure the module by navigating through **Stores->Configuration->Webkul Prefixer->Setting** as shown in the snapshot below.

The screenshot displays the Magento 2 admin interface for configuring the Webkul Prefixer module. The left sidebar shows the navigation menu with 'Stores' selected. The main content area is titled 'Configuration' and shows the 'Setting' configuration for the 'WEBKUL PREFIXER' module. The configuration is organized into four sections, each with a 'Credit Memo Id Prefix', 'Shipment Id Prefix', 'Invoice Id Prefix', and 'Order Id Prefix'. Each section has a text input field with the placeholder 'webkul_Store_Prefix_h' and a 'Save Config' button. Red callout boxes provide instructions: 'Click here to save the configuration.' points to the Save Config button; 'Here admin can choose any kind of custom prefix including alphabetical, numeric etc.' points to the input field; and three other callouts point to the input fields for Credit Memo ID, Shipment ID, and Order ID, stating 'Admin will enter the [type] ID Prefix here.'

For entering your created prefixes you need to select the store in which you want to save your prefix as per snapshot below.

The screenshot displays the Magento 2 Configuration interface. At the top, there is a yellow banner with "System Messages: 1" and a search bar. The main header shows "Configuration" and the user "admin". The left sidebar contains various navigation options, with "Stores" highlighted. The "Store View" dropdown is set to "Default Config". A dropdown menu is open, showing options: "Default Config", "Main Website", "Germany", "de", "web2", "Us", "us view", and "Stores Configuration". A red callout box points to the "Stores Configuration" option with the text: "Here admin will select the store in which he wants to save the prefix." Below the dropdown, the "Setting" option is highlighted in the left sidebar. The main content area shows four configuration sections, each with an "Enter Your Prefix [store view]" input field containing "webkull_Store_Prefix_h":

- Credit Memo Id Prefix
- Shipment Id Prefix
- Invoice Id Prefix
- Order Id Prefix

At the bottom, the footer contains the copyright notice "Copyright © 2016 Magento Commerce Inc. All rights reserved." and the version "Magento ver. 2.1.1" with a "Report Bugs" link.

Let's say admin selected the German store, now admin will enter the prefixes for this store view then uncheck the "Use Website" and then save the configuration as shown below in the snapshot.

In case the admin doesn't want to use the feature of this module then admin can set all the values as null(Blank).

Now after **setting up the prefixes** for this store view, the **output** will be like this –

At the Order Page –

ID	Purchase Point	Purchase Date	Bill-to Name	Ship-to Name	Grand Total (Base)	Grand Total (Purchased)	Status	Action
webkul_pre000000003	Main Website Germany de	Oct 14, 2016, 7:10:00 AM	cairo mapsa	cairo mapsa	\$10.00	\$10.00	Pending	View
webkul_000000002		Oct 14, 2016, 7:10:00 AM	cairo mapsa	cairo mapsa	\$1,005.00	\$1,005.00	Pending	View
