

Installation Of Marketplace Seller Category

#1 Download Module

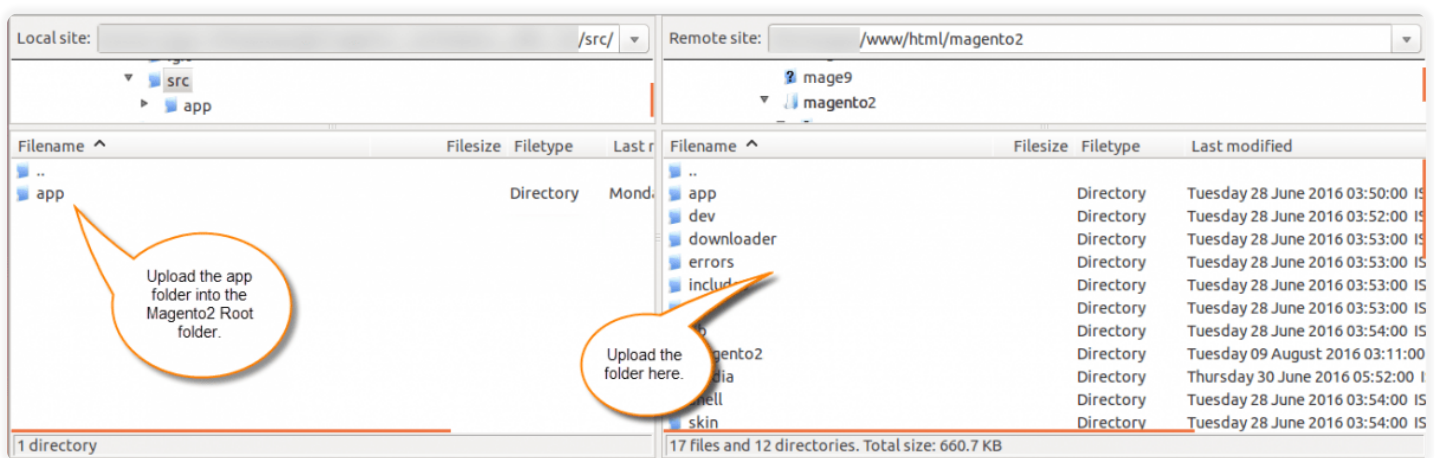

Firstly, you need to log in to Webkul Store, go to **My Account>My Purchased Products** section, verify and then download and extract the contents of this zip folder on the system.

#2 Upload Folder

Customers will get one zip folder and they have to extract the contents of the zip folder on their system.

Also, the extracted folder will have an **src** folder, inside the src folder you have the **app** folder.

Then, You need to transfer this **app** folder into the Magento2 root directory on the server as shown below.

After the successful installation, you have to **run these commands** in the **Magento2 root** directory:

#3 Run Commands

After uploading the module folder, you need to run the following commands in the Magento 2 root directory:

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

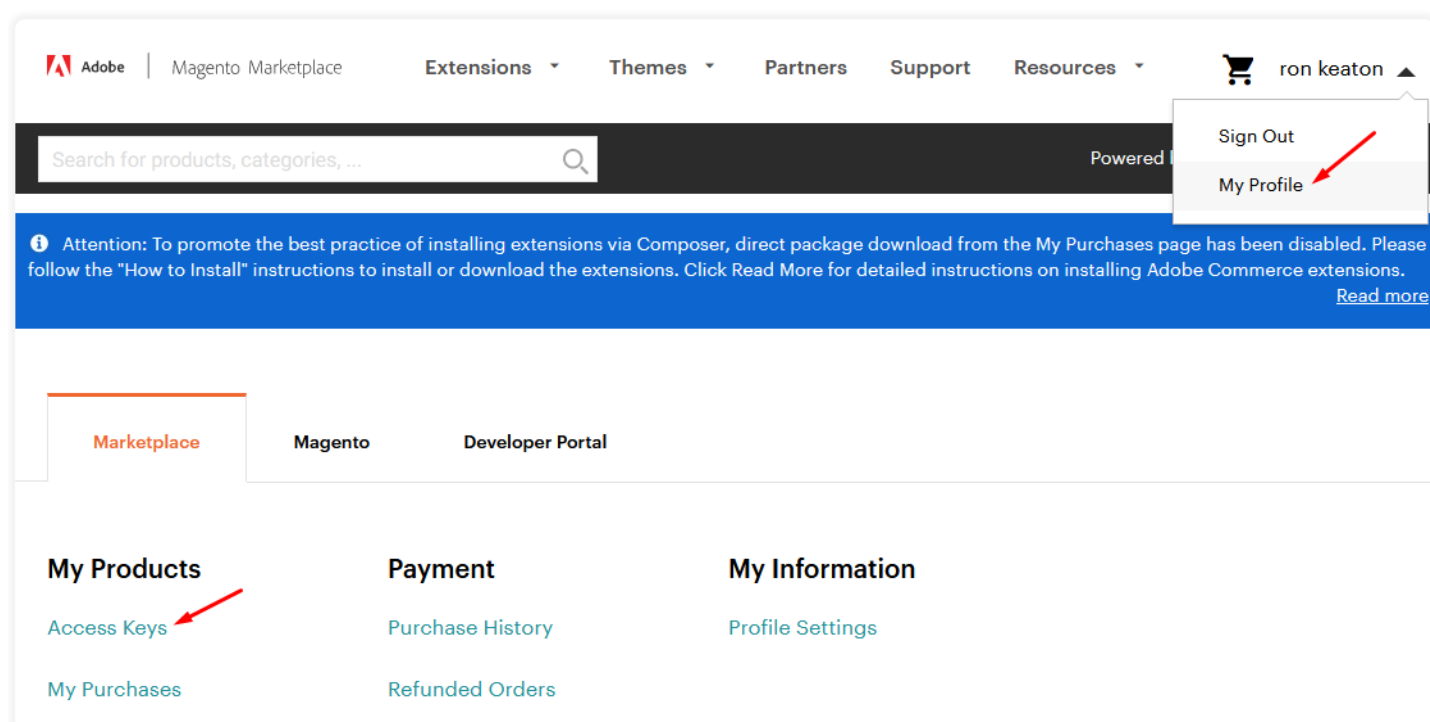

```
php bin/magento setup:static-content:deploy
```

Install Extension From Magento Marketplace

If you have purchased this extension from the Magento Marketplace then please follow the below process or visit [this](#) link.

#1 Get Access Keys

You need to get access keys, navigate to **My Profile** in Magento Marketplace, then choose **Access Keys** in the **My Products** section.

details. **Please note – Below is an example image, every extension will have its unique component name and version.**

To install an extension or download the extension code for review, you need to use Composer. See "How to Install" section below for instructions. To learn more about Composer, click here: <https://getcomposer.org>.

All Platforms ▾ All Editions ▾

Magento 2
Open Source (CE)
Multi Vendor Marketplace

Component name:
webkul/module-marketplace

Versions available
v4.0.0 ▾

How to Install:

1. Please ensure you are using correct access keys ([My Profile - Access Keys](#))
2. Paste the access keys in your auth.json file inside your project
3. Use the "composer require <module_name>:<version>" command to add the extension to your project. If you just need the extension package code for a specific version (for example, for code review purposes), you can initialize an empty project and just add composer require statement for the extension to a blank composer.json
4. You can see the list of versions in the selector below the extension module name

For detailed instructions, see [DevDocs](#)

After that, navigate to your Magento project directory and update your composer.json file in the following format.

composer require <component-name>:<version>

For example, to install version 5.0.0 of this extension you need to run the following command:

composer require webkul/marketplace-seller-category:5.0.0

#3 Enter Access Keys

Now you will need to enter the [Access Keys](#) that you obtained as explained in the first step #1 Get Access Keys. Wait for Composer to finish updating your project dependencies and make sure there aren't any errors.

#4 Run Command

You need to run the following commands:

```
php bin/magento setup:upgrade
```

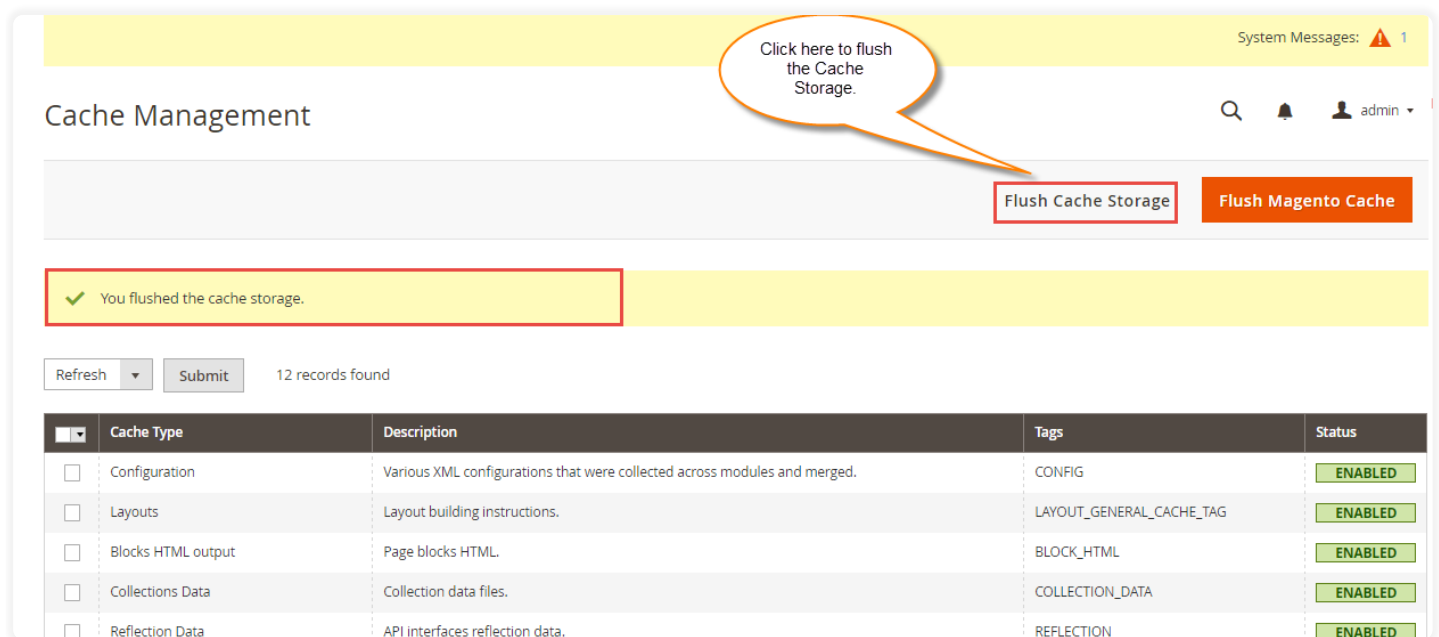

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

```
php bin/magento indexer:reindex
```

```
php bin/magento cache:clear
```

So, post running the commands, you have to flush the cache from the Magento admin panel by navigating through->**System->Cache management**.

Cache Management

System Messages: ▲ 1

Flush Cache Storage Flush Magento Cache

✓ You flushed the cache storage.

Refresh Submit 12 records found

Cache Type	Description	Tags	Status

<input type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED
<input type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	ENABLED
<input type="checkbox"/> Reflection Data	API interfaces reflection data.	REFLECTION	ENABLED

Configuration For Multi-Lingual Support

For the **multilingual** support, the admin will navigate through **Store->Configuration->General ->Locale Options** and select the **locale** as German (the language into which admin want to translate his store content).

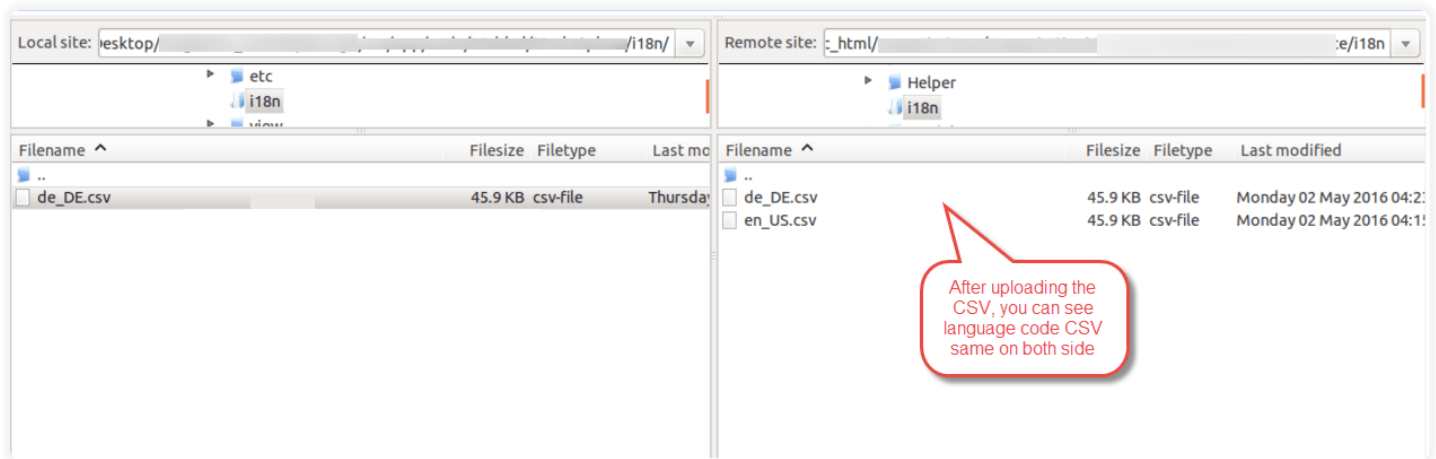

The screenshot shows the Magento 2 Configuration interface. On the left is a sidebar with navigation icons for Dashboard, Marketplace Management, Sales, Products, Customers, Marketing, Content, Reports, Stores, System, and Find Partners & Extensions. The main content area is titled 'Configuration' and shows the 'Store View' as 'Default Config'. The 'General' section is expanded, and the 'Locale' dropdown menu is highlighted with a red box. The selected locale is 'German (Germany)'. A red speech bubble points to the dropdown with the text: 'Here store selected locale option is German, move CSV file inside magento>app>locale>de_DE'. Other configuration options visible include Timezone (GMT (UTC)), Weight Unit (lbs), First Day of Week (Sunday), and Weekend Days (Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday).

Module Translation

If a user wants to translate their module from English to German then they need to follow the path **app/code/Webkul/MpSellerCategory/i18n** in their unzipped Magento Marketplace folder and will get a csv file with name “en_US.csv”.

Now they will rename that csv as “de_DE.csv” and translate all right side content after the comma in the German language. After editing the CSV, save it and then upload it to the path **app/code/Webkul/MpSellerCategory/i18n** where they have installed Magento2 on the server.

Now, the module gets translated in the German Language. It supports both the **LTR** and **RTL** languages.

The user can edit the CSV like the image below.

```
